This major work covers almost all that has been learned about the acoustics of stringed instruments from Helmholtz's 19th-century theoretical elaborations to recent electroacoustic and holographic measurements. Many of the results presented here were uncovered by the author himself (and by his associates and students) over a 20-year period of research on the physics of instruments in the violin family. Lothar Cremer is one of the world's most respected authorities on architectural acoustics and, not incidentally, an avid avocational violinist and violist. The book—which was published in German in 1981—first of all meets the rigorous technical standards of specialists in musical acoustics. But it also serves the needs and interests of two broader groups: makers and players of stringed instruments are expressly addressed, since the implications of the mathematical formulations are fully outlined and explained; and acousticians in general will find that the work represents a textbook illustration of the application of fundamental principles and up-to-date techniques to a specific problem. The first—and longest—of the book's three parts investigates the oscillatory responses of bowed (and plucked) strings. The natural nonlinearities that derive from considerations of string torsion and bending stiffness are deftly handled and concisely modeled. The second part deals with the body of the instrument. Special attention is given to the

bridge, which transmits the oscillations of the strings to the wooden body and its air cavity. In this case, linear modeling proves serviceable for the most part—a simplification that would not be possible with lute—like instruments such as the guitar. The radiation of sound from the body into the listener's space, which is treated as an extension of the instrument itself, is the subject of the book's final part.

Like Everything I Really Needed to Know, I Learned in Kindergarten, or Tuesdays with Morrie, Obit is a wise and deeply moving book that illuminates the human condition. For ten years, Jim Sheeler has scoured Colorado looking for subjects whose stories he will tell for the last time. Most are unknowns, but that doesn't mean they're nobodies. Their obituaries are sometimes humorous, sometimes heartbreaking, and chock full of life lessons as taught by the people we all pass on the street every day. And thanks to Sheeler's brilliant and compassionate prose, it's not too late to meet them.

Research and scientific progress are based upon intuition coordinated with a wide theoretical knowledge, experimental skill, and a realistic sense of the limitations of technology. Only a deep insight into physical phenomena will supply the necessary skills to handle the problems that arise in acoustics. The acoustician today needs to be well acquainted with mathematics, dynamics, hydrodynamics, and physics; he also needs a good knowledge of statistics, signal processing, electrical theory, and of many other specialized subjects. Acquiring this background is a laborious task and would require the study of many different books. It is the goal of this volume to present this background in as thorough and readable a manner as possible so that the reader may turn to specialized publications or chapters of other books for further information without having to start at the preliminaries. In trying to accomplish this goal, mathematics serves only as a tool; the better our understanding of a physical phenomenon, the less mathematics is needed and the shorter and more concise are our computations. A word about the choice of subjects for this volume will be helpful to the reader. Even scientists of high standing are frequently not acquainted with the fundamentals needed in the field of acoustics. Chapters I to IX are devoted to these fundamentals. After studying Chapter I, which discusses the units and their relationships, the reader should have no difficulty converting from one system of units to any other.

Based on his Pulitzer Prize-winning story, Jim Sheeler's unprecedented look at the way our country honors its dead; *Final Salute* is a stunning tribute to the brave troops who have lost their lives in Iraq and Afghanistan and to the families who continue to mourn them. They are the troops that nobody wants to see, carrying a message that no military family ever wants to hear. It begins with a knock at the door. "The curtains pull away. They come to the door. And they know. They always know," said Major Steve Beck. Since the start of the war in Iraq, marines like Major Beck found themselves thrown into a different kind of mission: casualty notification. It is a job Major Beck never asked for and one for which he received no training. They are given no set rules, only impersonal guidelines. Marines are trained to kill, to break down doors, but casualty notification is a mission without weapons. For Beck, the mission meant learning each dead marine's name and nickname, touching the toys they grew up with and reading the letters they wrote home. He held grieving mothers in long embraces, absorbing their muffled cries into the dark blue shoulder of his uniform. He stitched himself into the fabric of their lives, in the simple hope that his compassion might help alleviate at least the smallest piece of their pain. Sometimes he returned home to his own family unable to keep from crying in the dark. In *Final Salute*, Pulitzer Prize-winning journalist Jim Sheeler weaves together the stories of the fallen and of the broken homes they have left behind. It is also the story of Major Steve Beck and his unflagging efforts to help heal the wounds of those left grieving. Above all, it is a moving tribute to our troops, putting faces to the mostly anonymous names of our courageous heroes, and to the brave families who have made the ultimate sacrifice for this country. *Final Salute* is the achingly beautiful,

devastatingly honest story of the true toll of war. After the knock on the door, the story has only begun.
