It demonstrates how to accentuate or minimize

textures, add or subtract highlights, and create or combat shadows to showcase the subjects in the best way and create the illusion of a third dimension in the images. Exploring techniques for lighting portraits, still-life subjects, nature images, and architectural shots, both studio and location lighting are covered in detail. The book teaches photographers how to study their subjects—with all of the textures, colors, shapes, and surfaces they have—then visualize the image as a finished photograph before the photography actually begins.
