Covering the detailed anatomy, physiology, and clinical aspects of the temporal lobe and the limbic system, this monograph makes a timely appearance because of the widespread interest in this subject in relation to epilepsy, Alzheimer's disease, and schizophrenia. The structural and functional information serves as an important foundation for the detailed anatomical knowledge necessary for the interpretation of imaging. The components of the temporal lobe are characterized. The temporal isocortex is considered from the point of view of its principal cellular constituents, connectivity, columnar organization, and how the cortex embodies experience. The cortical association areas for vision, audition, degustation, visceral sensory function, and olfaction are treated in detail, and the cortical area of the temporal lobe relating to speech is discussed. The structure of the insula, the temporal cortex, and its connectivity to the thalamus, pulvinar, striatum, and claustrum are described thoroughly. A chapter reviews the structure, connections and functions of the olfactory system, as well as its social aspects and pathological conditions. The largest chapter deals with the hippocampus--its anatomy and connections, its cellular architectonics, its relation to memory, and its varied functions. The final chapter details the amygdala, its connections, and its significant role in temporal lobe seizures.

The definitive, easy to understand and breakthrough guide on how young people can take their limited first income and turn it into a small fortune by

the time they turn thirty from an expert financial planner. Most people know that there are 70 million Baby Boomers in America today....but what is less known is that there are approximately 100 million people in America between the ages of 16 and 30. This generation has just entered, or will soon be entering the work force. And they have no idea how to invest, save, or handle their money. Young people today come out of school having had little or no formal education on the basics of money management. Many have large debts from student loans looming over their heads. And many feel confused and powerless when their pricey educations don't translate into high paying jobs. They feel that their \$30,000-\$40,000 salary is too meager to bother with investing, and they constantly fear that there will be "too much month left at the end of their money." Douglas R. Andrew has shown the parents of this generation a different pathway to financial freedom. Now Doug and his sons, Emron and Aaron - both of whom are in their mid-20s - show the under-30 crowd how they can break from traditional 401k investment plans and instead can find a better way by investing in real estate, budgeting effectively, avoiding unnecessary taxes and using life insurance to create tax-free income. With the principles outlined in Millionaire by Thirty, recent graduates will be earning enough interest on their savings to meet their basic living expenses by the time they're 30. And by the time they're 35, their investments will be earning more money than they are, guaranteeing them a happy, wealthy future.
