This is an exciting new edition of R.W. Connell's ground-breaking text, which has become a classic work on the nature and construction of masculine identity. Connell argues that there is not one masculinity, but many different masculinities, each associated with different positions of power. In a world gender order that continues to privilege men over women, but also raises difficult issues for men and boys, his account is more pertinent than ever before. In a substantial new introduction and conclusion, Connell discusses the development of masculinity studies in the ten years since the book's initial publication. He explores global gender relations, new theories, and practical uses of masculinity research. Looking to the future, his new concluding chapter addresses the politics of masculinities, and the implications of masculinity research for understanding current world issues. Against the backdrop of an increasingly divided world, dominated by neo-conservative politics, Connell's account highlights a series of compelling questions about the future of human society. This second edition of Connell's classic book will be essential reading for students taking courses on masculinities and gender studies, and will be of interest to students and scholars across the humanities and social sciences.

The most significant domestic issue of the 2004 elections is unemployment. The United States has lost nearly three million jobs in the last ten years, and real employment hovers around 9.1 percent. Only one political analyst foresaw the dark side of the technological revolution and understood its implications for global employment: Jeremy Rifkin. *The End of Work* is Jeremy Rifkin's most influential and important book. Now nearly ten years old, it has been updated for a new, post-New Economy era. Statistics and figures have been revised to take new trends into account. Rifkin offers a tough, compelling critique of the flaws in the techniques the government uses to compile employment statistics. *The End of Work* is the book our candidates and our country need to understand the employment challenges-and the hopes-facing us in the century ahead.

This is the first book that addresses the issue of research notes for writing history of science in a comprehensive manner. Its case studies range from the early modern period to present and cover a broad range of different disciplines. The contributions are based on papers presented at the workshop entitled "Reworking the Bench: Laboratory Notebooks in the History of Science", held at the Max Planck Institute for the History of Science in Berlin or written after the workshop.

Oracle E-Business Suite Inventory R12 Springer Science & Business Media This is the origin story of technology super heroes: the creators and founders of ARM, the company that is responsible for the processors found inside 95% of the world's mobile devices today. This is also the evolution story of how three companies - Apple, Samsung, and Qualcomm - put ARM technology in the hands of billions of people through smartphones, tablets, music players, and more. It was anything but a straight line from idea to success for ARM. The story starts with the triumph of BBC Micro engineers Steve Furber and Sophie Wilson, who make the audacious decision to design their own microprocessor - and it works the first time. The question becomes, how to sell it? Part I follows ARM as its founders launch their own company, select a new leader, a new strategy, and find themselves partnered with Apple, TI, Nokia, and other companies just as digital technology starts to unleash mobile devices. ARM grows rapidly, even as other semiconductor firms struggle in the dot com meltdown, and establishes itself as a standard for embedded RISC processors. Apple aficionados will find the opening of Part II of interest the moment Steve Jobs returns and changes the direction toward fulfilling consumer dreams. Samsung devotees will see how that firm evolved from its earliest days in consumer electronics and semiconductors through a philosophical shift to innovation. Qualcomm followers will learn much of their history as it plays out from satellite communications to development of a mobile phone standard and emergence as a leading fabless semiconductor company. If ARM could be summarized in one word, it would be "collaboration." Throughout this story, from Foreword to Epilogue, efforts to develop an ecosystem are highlighted. Familiar names such as Google, Intel, Mediatek, Microsoft, Motorola, TSMC, and others are interwoven throughout. The evolution of ARM's first 25 years as a company wraps up with a shift to its next strategy: the Internet of Things, the ultimate connector for people and devices. Research for this story is extensive, simplifying a complex mobile industry timeline and uncovering critical points where ARM and other companies made fateful and sometimes surprising decisions. Rare photos, summary diagrams and tables, and unique perspectives from insiders add insight to this important telling of technology history.

The disproportionate aging of the population of working age in many nations around the world is a unique occurrence in the history of humankind. In the light of demographic change, it is becoming increasingly important to develop and use the potential of older employees. This edited volume *Age-differentiated Work Systems* provides a final report on a six-year priority program funded by the German Research Foundation (DFG) and presents selected research findings of 17 interdisciplinary project teams. The idea is that it will serve both as a reference book and overview of the current state of research in ergonomics, occupational psychology and related disciplines. It provides new models, methods, and procedures for analyzing and designing age-differentiated work systems with the aim of supporting subject matter experts from different areas in their decisions on labor and employment policies. Therefore over 40 laboratory experiments involving 2,000 participants and 50 field studies involving over 25,000 employees were conducted. Further objectives of the edited volume were to provide a pluridisciplinary compilation of the extensive information acquired over the six-year program period, to illustrate the range of the research field, and to convey an integrated understanding of age-differentiated work systems to

readers.

The IL " track " —one of five tracks within VA's VR&E program—provides a range of benefits to help veterans with service-connected disabilities live independently when employment is not considered feasible at the time they enter the VR&E program. These benefits can include counseling, assistive devices, and other services or equipment. GAO was asked to review issues related to the IL track. This report examines (1) the characteristics of veterans in the IL track, and the types and costs of benefits they were provided; (2) the extent to which their IL plans were completed, and the time it took to complete them; and (3) the extent to which the IL track has been administered appropriately and consistently across regional offices. To conduct this work, GAO analyzed VA administrative data from fiscal years 2008 to 2011, and reviewed a random, generalizable sample of 182 veterans who entered the IL track in fiscal year 2008. In addition, GAO visited five VA regional offices; interviewed agency officials and staff; and reviewed relevant federal laws, regulations, and agency policies and procedures. Of the 9,215 veterans who entered the Department of Veterans Affairs' (VA) Independent Living (IL) track within the Vocational Rehabilitation and Employment (VR&E) program in fiscal years 2008 to 2011, most were male Vietnam era veterans in their 50s or 60s. Almost 60 percent served in the U.S. Army, and fewer than 1 percent served in the National Guard or Reserve. The most prevalent disabilities among these veterans were post-traumatic stress disorder and tinnitus. GAO's review of 182 IL cases from fiscal year 2008 found that VR&E provided a range of IL benefits to veterans. Among these cases, the most common benefits were counseling services and computers. Less common benefits included gym memberships, camping equipment, and a boat. GAO estimated that VR&E spent nearly \$14 million on benefits for veterans entering the IL track in fiscal year 2008—an average of almost \$6,000 per IL veteran. Most veterans completed their IL plans, which identify their individual goals to live independently and the benefits VR&E will provide. About 89 percent of fiscal year 2008 IL veterans were considered by VR&E to be " rehabilitated, " that is, generally, to have completed their IL plans by the end of fiscal year 2011. VR&E discontinued or closed about 5 percent of cases for various reasons, such as the veteran declined benefits. Six percent of cases were open at the end of fiscal year 2011. Because the complexity of IL cases varied depending on veterans' disabilities and needs, some cases were fairly simple for VR&E to close. For example, one IL case only called for the installation of door levers and a bathtub rail. Another more complex case involved the provision of a range of IL benefits, including home modifications. Rehabilitation rates across regions varied from 0 to 100 percent, and regions with larger IL caseloads generally rehabilitated a greater percentage of IL veterans. While IL plans nationwide were completed in 384 days, on average, completion times varied by region, from 150 to 895 days. VR&E exercises limited oversight to ensure appropriate and consistent administration of the IL track across its regions. While the law currently allows 2,700 veterans to enter the IL track annually, data used to monitor the cap are based on the number of IL plans developed, not on the number of individual veterans admitted. Veterans can have more than one plan in a fiscal year, so one veteran could be counted multiple times towards the cap. GAO-13-474

This book focuses on the human aspects of wearable technologies and game design, which are often neglected. It shows how user centered practices can optimize wearable experience, thus improving user acceptance, satisfaction and engagement towards novel wearable gadgets. It describes both research and best practices in the applications of human factors and ergonomics to sensors, wearable technologies and game design innovations, as well as results obtained upon integration of the wearability principles identified by various researchers for aesthetics, affordance, comfort, contextual-awareness, customization, ease of use, ergonomics, intuitiveness, obtrusiveness, information overload, privacy, reliability, responsiveness, satisfaction, subtlety, user friendliness and wearability. The book is based on the AHFE 2018 Conference on Human Factors and Wearable Technologies and the AHFE 2018 Conference on Human Factors in Game Design and Virtual Environments, held on July 21 – 25, 2018 in Orlando, Florida, and addresses professionals, researchers, and students dealing with the human aspects of wearable, smart and/or interactive technologies and game design research.
