increased use of high-stakes standardized testing is fundamentally changing education in the US and Canada with a negative overall impact on the way teachers teach and students learn. Standardized testing makes understanding students' strengths and weaknesses more difficult, and class time spent on testing consumes scarce time and attention needed to support the success of all students—further disadvantaging ELLs, students with exceptionalities, low income, and racially

minoritized students. Routledge Leading Change Series  
In the face of a global pandemic, catastrophic weather events, war, racism, and attacks on democracy, how should educational leaders respond? How can leaders enable their schools and districts to be agile, safe, and effective places of

learning that help young people develop the knowledge and character that will empower them to shape their futures? While some schools and districts have taken top-down or bottom-up approaches, renowned education scholar Andy Hargreaves explores a new type of leadership - "leadership from the middle" - which becomes a driver of transformational change. Drawing from research with educational leaders across the United States, United Kingdom, and Canada, Hargreaves discusses a type of leadership that regards obstacles as opportunities, embraces leadership paradox, and is collaborative, inspiring, and inclusive. This ground-breaking book unpacks not only what this

type of leadership looks like, but also how it is most effective in addressing complex problems and in educating young people to develop diverse global competencies to prepare them for their futures.

A thinking student is an engaged student Teachers often find it difficult to implement lessons that help students go beyond rote

memorization and repetitive calculations. In fact, institutional norms and habits that permeate all classrooms can actually be enabling "non-thinking" student behavior. Sparked by observing teachers struggle to implement rich mathematics tasks to engage students in deep thinking, Peter Liljedahl has translated his 15 years of research into this practical guide on how to move toward a thinking classroom. *Building Thinking Classrooms in Mathematics, Grades K – 12* helps teachers implement 14 optimal practices for thinking that create an ideal setting for deep mathematics learning to occur. This guide Provides the what, why, and how of each practice and answers teachers ' most frequently asked

questions Includes firsthand accounts of how these practices foster thinking through teacher and student interviews and student work samples Offers a plethora of macro moves, micro moves, and rich tasks to get started Organizes the 14 practices into four toolkits that can be implemented in order and built on throughout the year When combined, these unique research-based practices create the optimal conditions for learner-centered, student-owned deep mathematical thinking and learning, and have the power to transform mathematics classrooms like never before.
