"Body Physics was designed to meet the objectives of a one-term high school or freshman level course in physical science, typically designed to provide non-science majors and undeclared students with exposure to the most basic principles in physics while fulfilling a science-with-lab core requirement. The content level is aimed at students taking their first college science course, whether or not they are planning to major in science. However, with minor supplementation by other resources, such as OpenStax College Physics, this textbook could easily be used as the primary resource in 200-level introductory courses. Chapters that may be more appropriate for physics courses than for general science courses are noted with an asterisk (\*). Of course this textbook could be used to supplement other primary resources in any physics course covering mechanics and thermodynamics"--Textbook Web page.

What is America? Is it a hegemonic superpower, composed of ruthlessly selfish capitalists? Or is it a land of hope and glory, a shelter for the huddled masses, and a beacon of freedom and enlightenment? The definition of this complex nation has been debated substantially, yet all seem to agree on one thing: it is unique. The idea of an exceptional America can be traced all the way back to Alexis de Tocqueville's nineteenth-century observations of a newly formed democracy that seemed determined to distinguish itself from the rest. Little, it seems, has changed. Building on de Tocqueville's concept of American exceptionalism, this collection of essays, contributed by some of the nation's top scholars and thinkers, takes on the weighty task of sizing up America in a way its people and others can comprehend. Far more than simple history, they outline the current state of American institutions and policies -- from the legal system to marriage to the military to the Drug War -- and anticipate where these are headed in the future.

The author's humorous and lighthearted style painlessly imparts the principles of isotope ecology. The online material contains color illustrations, spreadsheet models, technical appendices, and problems and answers.

**PULITZER PRIZE WINNER** • A dramatic story of groundbreaking scientific research of Darwin's discovery of evolution that "spark[s] not just the intellect, but the imagination" (Washington Post Book World). "Admirable and much-needed.... Weiner's triumph is to reveal how evolution and science work, and to let them speak clearly for themselves."—The New York Times Book Review On a desert island in the heart of the Galapagos archipelago, where Darwin received his first inklings of the theory of evolution, two scientists, Peter and Rosemary Grant, have spent twenty years proving that Darwin did not know the strength of his own theory. For among the finches of Daphne Major, natural selection is neither rare nor slow: it is taking place by the hour, and we can watch. In this remarkable story, Jonathan Weiner follows these scientists as they watch Darwin's finches and come up with a new understanding of life itself. The Beak of the Finch is an elegantly written and compelling masterpiece of theory and explication in the tradition of Stephen Jay Gould.

The System of Objects is a tour de force—a theoretical letter-in-a-bottle tossed into the ocean in 1968, which brilliantly communicates to us all the live ideas of the day. Pressing Freudian and Saussurean categories into the service of a basically Marxist perspective, The System of Objects offers a cultural critique of the commodity in consumer society. Baudrillard classifies the everyday objects of the "new technical order" as functional, nonfunctional and metafunctional. He contrasts "modern" and "traditional" functional objects, subjecting home furnishing and interior design to a celebrated semiological analysis. His treatment of nonfunctional or "marginal" objects focuses on antiques and the psychology of collecting, while the metafunctional category extends to the useless, the aberrant and even the "schizofunctional." Finally, Baudrillard deals at length with the implications of credit and advertising for the commodification of everyday life. The System of Objects is a tour de force of the materialist semiotics of the early Baudrillard, who emerges in retrospect as something of a lightning rod for all the live ideas of the day: Bataille's political economy of "expenditure" and Mauss's theory of the gift; Reisman's lonely crowd and the "technological society" of Jacques
