During the Cold War, the U.S. government began testing paranormal claims under laboratory

conditions in hopes of realizing intelligence applications for psychic phenomena. Thus began the project known as Star Gate. The largest in the history of parapsychological research, it received more than \$20 million in funding and continued into the mid-1990s. This project archive includes all available documents generated by research contractor SRI International and those provided by government officials. Remote viewing (RV) is an atypical ability that allows some individuals to gain information blocked from the usual senses by shielding, distance or time. During the final decade of Star Gate, the emphasis shifted to a support role of a government in-house psychic spying unit at Ft. Meade, MD, and to engage a number of full-time scientists to investigate the physical and biological properties of RV, which proved successful. Results included how to identify the RV-gifted, what constitutes an RV target, some correlations with parts of the nervous system, and an indication of a potential 6th sense. This volume includes numerous examples as well as operational simulations.

The Entity-Relationship Model Cengage Learning

Excerpt from The Entity-Relationship Model: A Basis for the Enterprise View of Data

The subject of the logical view of data has attracted considerable attention in the past ten years. However, most researchers have focused on the user View of data. The need for studying the enterprise view of data was not recognized until recently. Different users of a database may have different views of the database, but the enterprise should have a unique and consistent view of the database. This is particularly important in designing a logically meaningful and consistent database. The concept of the enterprise View of data is very useful in the database design process and in. In designing the Handbook of the History of Logic, the Editors have taken the view that the history of logic holds more than an antiquarian interest, and that a knowledge of logic's rich and sophisticated development is, in various respects, relevant to the research programmes of the present day. Ancient logic is no exception. The present volume attests to the distant origins of some of modern logic's most important features, such as can be found in the claim by the authors of the chapter on Aristotle's early logic that, from its infancy, the theory of the syllogism is an example of an intuitionistic, non-monotonic, relevantly paraconsistent logic. Similarly, in addition to its comparative earliness, what is striking about the best of the Megarian and Stoic traditions is their sophistication and originality.

(exam 70-73) "O'Reilly Media, Inc."

In the late 1970s and early 1980s, our nation began to grapple with the legacy of past disposal practices for toxic chemicals. With the passage in 1980 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), commonly known as Superfund, it became the law of the land to remediate these sites. The U. S. Department of Defense (DoD), the nation's largest industrial organization, also recognized that it too had a legacy of contaminated sites. Historic operations at Army, Navy, Air Force, and Marine Corps facilities, ranges, manufacturing sites, shipyards, and depots had resulted in widespread contamination of soil, groundwater, and sediment. While Superfund began in 1980 to focus on remediation of heavily contaminated sites largely abandoned or neglected by the private sector, the DoD had already initiated its Installation Restoration Program in the mid-1970s. In 1984, the DoD began the Defense Environmental Restoration Program (DERP) for contaminated site assessment and remediation. Two years later, the U. S. Congress codified the DERP and directed the Secretary of Defense to carry out a concurrent program of research, development, and demonstration of innovative remediation technologies. As chronicled in the 1994 National Research Council report, "Ranking Hazardous-Waste Sites for Remedial Action," our early estimates on the cost and suitability of existing technologies for cleaning up contaminated sites were wildly optimistic. Original estimates, in 1980, projected an average Superfund cleanup cost of a mere \$3.
