The Story of America's Elite Counterterrorist Unit Vintage

The role of the U.S. Supreme Court in the aftermath of the 2000 presidential election raised questions in the minds of many Americans about the relationships between judges and political influence; the following years saw equally heated debates over the appropriate role of political ideology in selecting federal judges. Legal scholars have always debated these questions—asking, in effect, how much judicial systems operate on merit and principle and how much they are shaped by politics. The Japanese Constitution, like many others, requires that all judges be "independent in the exercise of their conscience and bound only by this Constitution and its laws." Consistent with this requirement, Japanese courts have long enjoyed a reputation for vigilant independence—an idea challenged only occasionally, and most often anecdotally. But in this book, J. Mark Ramseyer and Eric B. Rasmusen use the latest statistical techniques to examine whether that reputation always holds up to scrutiny—whether, and to what extent, the careers of lower court judges can be manipulated to political advantage. On the basis of careful econometric analysis of career data for hundreds of judges, Ramseyer and Rasmusen find that Japanese politics do influence judicial careers, discreetly and indirectly: judges who decide politically charged cases in ways favored by the ruling party enjoy better careers after their decisions than might otherwise be expected, while dissenting judges are more likely to find their careers hampered by assignments to less desirable positions. Ramseyer and Rasmusen's sophisticated yet accessible analysis has much to offer anyone interested in either judicial independence or the application of econometric techniques in the social sciences.

Are you one of the millions of people out there who feel like they've read everything there is to read on fitness and have spent an

enormous amount of time and money trying to get fit—and still failed? Until you know how your body really works and reacts to physical activity, you may never succeed. Eric Heiden, M.D., and Massimo Testa, M.D., two preeminent sports physicians who know the training needs of beginners as intimately as those of elite athletes, want to fix this problem. They know there has been an entire field of training science and medicine that has never been translated for the general public—until now. In a program that is designed for everyday people, Heiden and Testa bring us *Faster, Better, Stronger*, a customized, science-based program designed to guide you into a lifelong fitness habit, giving you step-by-step instructions on how to make the most of your body through exercise—physically, mentally, biomechanically, and nutritionally. In Part I, the doctors detail the solid science behind your body's responses to exercise. They share the same philosophy and medical expertise they have shared with world-class athletes and give scientific "secrets" in several areas of fitness: the prescriptive aspects of exercise; the biology of movement; the importance of fueling your body with the right food and water; what rest really accomplishes; and motivation. They also debug and clarify some all-too-often misunderstood medical and biological truths about training, and offer you ways to find your hidden talents and strengths. These doctors know that the luxuries of time and access are significant factors in getting fit, and thus Part II helps you design your own unique, individualized exercise program no matter your age, ability, experience, or schedule. Once you have assessed your current fitness level, the doctors guide you through assembling blocks of activities into a twelve-week program that will get you started on the road to lifelong health.

Since the financial crisis, the issue of the 'one percent' has become the centre of intense public debate, unavoidable even for members of the elite themselves. Moreover, inquiring into elites has taken centre-stage once again in both journalistic investigations and academic research. *New Directions in Elite Studies* attempts to move the social scientific study of elites beyond economic analysis, which has greatly improved our knowledge of inequality, but is restricted to income and wealth. In contrast, this book mobilizes a broad scope of research methods to uncover the social composition of the power elite — the 'field of power'. It reconstructs processes through which people gain access to positions in this particular social space, examines the various forms of capital they mobilize in the process — economic, but also cultural and social capital — and probes changes over time and variations across national contexts. Bringing together the most advanced research into elites by a European and multidisciplinary group of scholars, this book presents an agenda for the future study of elites. It will appeal to all those interested in the study of elites, inequality, class, power, and gender inequality.

"This book is a message from autistic people to their parents, friends, teachers, coworkers and doctors showing what life is like on the spectrum. It's also my love letter to autistic people. For too long, we have been forced to navigate a world where all the road signs are written in another language." With a reporter's eye and an insider's perspective, Eric Garcia shows what it's like to be autistic across America. Garcia began writing about autism because he was frustrated by the media's coverage of it; the myths that the disorder is caused by vaccines, the narrow portrayals of autistic people as white men working in Silicon Valley. His own life as an autistic person didn't look anything like that. He is Latino, a graduate of the University of North Carolina, and works as a journalist covering politics in Washington D.C. Garcia realized he needed to put into writing what so many autistic people have been saying for years; autism is a part of their identity, they don't need to be fixed. In *We're Not Broken*, Garcia uses his own life as a springboard to discuss the social and policy gaps that exist in supporting those on the spectrum. From education to healthcare, he explores how autistic people wrestle with systems that were not built with them in mind. At the same time, he shares the experiences of all types of autistic people, from those with higher support needs, to autistic people of color, to those in the LGBTQ community. In doing so, Garcia gives his community a platform to articulate their own needs, rather than having others speak for them, which has been the standard for far too long.

The New York Times bestselling, groundbreaking investigation of how the global elite's efforts to "change the world" preserve the status quo and obscure their role in causing the problems they later seek to solve. An essential read for understanding some of the egregious abuses of power that dominate today's news. Former New York Times columnist Anand Giridharadas takes us into the inner sanctums of a new gilded age, where the rich and powerful fight for equality and justice any way they can--except ways that threaten the social order and their position atop it. We see how they rebrand themselves as saviors of the poor; how they lavishly reward "thought leaders" who redefine "change" in winner-friendly ways; and how they constantly seek to do more good, but never less harm. We hear the limousine confessions of a celebrated foundation boss; witness an American president hem and haw about his plutocratic benefactors; and attend a cruise-ship conference where entrepreneurs celebrate their own self-interested magnanimity. Giridharadas asks hard questions: Why, for example, should our gravest problems be solved by the unelected upper crust instead of the public institutions it erodes by lobbying and dodging taxes? He also points toward an answer: Rather than rely on scraps from the winners, we must take on the grueling democratic work of building more robust, egalitarian institutions and truly changing the world. A call to action for elites and everyday citizens alike.
