Medical education and the tools used for assessment are continually evolving. Single Best Answer (SBA) questions are a relatively new method of assessment commonly encountered in final surgical exams. The key to success in any SBA-style examination is practice, practice and more

practice. With nearly 300 structured questions, this book comprehensively covers the surgical curriculum. Each specialty-specific chapter contains a combination of clinical vignettes and knowledge-based questions of varying degrees of difficulty, both challenging the more able candidates as well as giving a realistic appreciation of the standard required to pass. Each question gives a detailed explanation of the correct answer to aid reflection and reinforce understanding. This book is the ideal revision aid for all undergraduate medical students preparing for their final examination in surgery. In addition, doctors studying for the Membership of the Royal College of Surgeons (MRCS) and the Professional and Linguistic Assessment Board (PLAB) examinations will also find this book extremely useful.

As the only text on the market for Sport and Exercise Medicine objective structured clinical examinations (OSCEs), this is an invaluable guide for those studying sport and exercise medicine and sitting examinations. Whilst

specifically targeted at the OSCE, this book will have much wider appeal throughout the clinical setting. Sport and Exercise Medicine is a new and developing specialty and there has been a rapid increase in the number of universities offering MSc degrees in Sport and Exercise Medicine and more candidates year on the year sitting the Faculty of Sport and Exercise Medicine (FSEM) diploma exam. It is a niche specialty, with very little content taught at an undergraduate level, therefore knowing the material that is examined is often challenging compared with other specialties. This book provides the content to fill that need. The book is divided into sections based on the main topics that arise in sport and exercise medicine OSCEs, with both core knowledge and practical tips to ensure a fluid and confident performance by the examinee in every station. A wide range of readers will benefit from this book, including those about to sit a postgraduate examination in sport and exercise medicine or those enrolled in a postgraduate certificate or master's course in the specialty. It will also be useful to doctors and allied healthcare professionals, such as physiotherapists, sports therapists, podiatrists and nurses, as well as undergraduate students. Further, the young clinician who is just starting out and wants to build their confidence in musculoskeletal assessment and presenting to seniors will gain much from reading this book.
