The Rockswold/Krieger algebra series fosters conceptual understanding by using relevant applications and visualization to show students why math matters. It answers the common question When will I ever use this? Rockswold teaches students the math in context, rather than including the applications at the end of the presentation. By seamlessly integrating meaningful applications that include real data and supporting visuals (graphs, tables, charts, colors, and diagrams), students are able to see how math impacts their lives as they learn the concepts. The authors believe this approach deepens conceptual understanding and better prepares students for future math courses and life." **Sentence Essentials** SAGE

There is great enthusiasm over the use of emerging interactive health information technologies—often referred to as eHealth—and the potential these technologies have to improve the quality, capacity, and efficiency of the health care system. However, many doctors, advocacy groups, policy makers and consumers are concerned that electronic health systems might help individuals and communities with greater resources while leaving behind those with limited access to technology. In order to address this problem, the Institute of Medicine's Roundtable on Health Literacy held a workshop to explore the current status of communication technology, the challenges for its use in populations with low health literacy, and the strategies for increasing the benefit of these technologies for populations with low health literacy. The summary of the workshop, "Health Literacy, eHealth, and Communication: Putting the Consumer First," includes participants' comments on these issues.

The Complete Guide to Success at University Ingram

JANET W. LERNER This timely volume explores issues pertinent to the emerging subject of college education for adults with learning disabilities. The inspiration for the book was a conference held at Barat College in Lake Forest Illinois on April 7, 1990, entitled College Students with Learning Disabilities: Reviewing the '80s and Planning for the '90s. The occasion was the celebration of the tenth anniversary of Barat College's program for college students with learning disabilities. Papers presented at this conference, plus several additional invited chapters, and those of the co editors are included in this much needed publication. Only a few years ago, college was out of the question for most adults with learning disabilities. It is heartening to note that this situation has changed substantially over the last 15 or so years, with great strides in opportunities for adults with learning disabilities to acquire a college level education. From a slow beginning with programs such as the one at Barat College, there are today programs and support services in a variety of settings at a growing number of colleges and universities. Many individuals with learning disabilities can look forward to experiencing college and better preparing themselves for the future. The collection of papers in this book offers a comprehensive review of this exciting and challenging field.

When it comes to motivating people to learn, disadvantaged urban adolescents are usually perceived as a hard sell. Yet, in a recent MetLife survey, 89 percent of the low-income students claimed "I really want to learn" applied to them.

What is it about the school environment "pedagogy, curriculum, climate, organization" that encourages or discourages engagement in school activities? How do peers, family, and community affect adolescents' attitudes towards learning? Engaging Schools reviews current research on what shapes adolescents' school engagement and motivation to learn "including new findings on students' sense of belonging" and looks at ways these can be used to reform urban high schools. This book discusses what changes hold the greatest promise for increasing students' motivation to learn in these schools. It looks at various approaches to reform through different methods of instruction and assessment, adjustments in school size, vocational teaching, and other key areas. Examples of innovative schools, classrooms, and out-of-school programs that have proved successful in getting high school kids excited about learning are also included.
