While ideology has been treated widely in CDA-literature, the role played by the interaction of text and image in multiplying meaning and furthering ideological stances has not so far received a lot of attention. Mediating Ideology in Text and Image offers a number of approaches to such analysis, offering students and academics valuable tools for identifying possible discrepancies between the world and the way it is represented through various mediational means. The authors' common aim is one of assisting the audience in reading between the lines, thus offering a variety of approaches that may contribute to a better understanding of how ideologies possibly work and how they may be denaturalised from text and image. The articles in part I look at rhetorical strategies used in meaning construction processes unfolding in various kinds of mass media. Part II focuses on the re-semiotization of meaning and looks at how analysing the combination of text and image may contribute to a better understanding of ideological processes brought about by multimodal resources. Foreword by Ruth Wodak.

Learning Not Schooling: Reimagining the Purpose of Education examines how both the curiosity and the initiative of students in their formative years can be stimulated by partnering local schools with the world of adult work and professional expertise. This tactic addresses some of the issues that seem to continually plague us, such as how to help students learn more effectively in the modern age, or how to more fully address some of the perpetual inequities between different socioeconomic groupings. Drawing on his experiences from founding and directing a private school for students age six to fourteen, Lyn Lesch presents a new model for education in which learning for students increasingly occurs in the world of adult expertise, with classroom teachers taking on the role of conduits that not only prepare students to learn from professionals working in various fields but also assist them in absorbing the advanced information and knowledge they will be acquiring.

Law, Rights and Ideology in Russia: Landmarks in the destiny of a great power brings into sharp focus several key episodes in Russia's vividly ideological engagement with law and rights. Drawing on 30 years of experience of consultancy and teaching in many regions of Russia and on library research in Russian-language texts, Bill Bowring provides unique insights into people, events and ideas. The book starts with the surprising role of the Scottish Enlightenment in the origins of law as an academic discipline in Russia in the eighteenth century. The Great Reforms of Tsar Aleksandr II, abolishing serfdom in 1861 and introducing jury trial in 1864, are then examined and debated as genuine reforms or the response to a revolutionary situation. A new interpretation of the life and work of the Soviet legal theorist Yevgeniy Pashukanis leads to an analysis of the conflicted attitude of the USSR to international law and human rights, especially the right of peoples to self-determination. The complex history of autonomy in Tsarist and Soviet Russia is considered, alongside the collapse of the USSR in 1991. An examination of Russia's plunge into the European human rights system under Yeltsin is followed by the history of the death penalty in Russia. Finally, the

secrets of the ideology of 'sovereignty' in the Putin era and their impact on law and rights are revealed. Throughout, the constant theme is the centuries long hegemonic struggle between Westernisers and Slavophiles, against the backdrop of the Messianism that proclaimed Russia to be the Third Rome, was revived in the mission of Soviet Russia to change the world and which has echoes in contemporary Eurasianism and the ideology of sovereignty.

Written as a technology guide for students, practitioners, and administrators, the focus of this book is on introducing current and future trends in library technology and automation within the larger context of strategic and systems planning, implementation, and continuous improvement. Technology is an essential resource for attaining both organizational and patron goals, and planning needs to emphasize the alignment between the clearly defined goals of each. For this alignment to occur on a consistent basis goals must be designed, or engineered, in a systematic fashion where technology fulfils the need to deliver the desired outcomes in an efficient, cost-effective manner. The concept of usability engineering is also examined, where the technology is planned, designed, and implemented in such a way as to maximize utility and ease-of-use for users and employees. Readers of this book will understand both the why and the how of library technology, planning, and implementation articulated in a simple, easy-

to-understand fashion. Delivered from academic, public, and school library media perspectives Current and emerging technologies are discussed along with their current and future application in the field of library and information science Technology planning and integration is explained using a systems design process with scenarios and case studies that are articulated in a step-wise, holistic fashion

Based on the proceedings of a satellite symposium held in conjunction with the 9th World Congress of Gastroenterology, the aim of this volume is to present and discuss the latest data originating from leading laboratories in the field. The change in focus of current research to studies of chronic repair rather than acute responses, and deeper mucosal elements rather than surface phenomena, is apparent. Many of the chapters contain previously unpublished findings.

Written in recognition of developments in spatial data analysis that focused on differences between places, the first edition of Local Models for Spatial Analysis broke new ground with its focus on local modelling methods. Reflecting the continued growth and increased interest in this area, the second edition describes a wide range of methods which account for local variations in geographical properties. What's new in the Second Edition: Additional material on geographically-weighted statistics and local regression approaches A better overview of local models with reference to recent critical reviews about the subject area Expanded coverage of individual methods and connections between them Chapters have been restructured to clarify the distinction between global and local methods A new section in each chapter references key studies or other accounts that support the book Selected resources provided online to support learning An introduction to the methods and their underlying concepts, the book uses worked examples and case studies to demonstrate how the algorithms work their practical utility and range of application. It provides an overview of a range of different approaches that have been developed and employed within Geographical Information Science (GIScience). Starting with first principles, the author introduces users of GISystems to the principles and application of some widely used local models for the analysis of spatial data, including methods being developed and employed in geography and cognate disciplines. He discusses the relevant software packages that can aid their implementation and provides a summary list in Appendix A. Presenting examples from a variety of disciplines, the book demonstrates the importance of local models for all who make use of spatial data. Taking a problem driven approach, it provides extensive guidance on the selection and application of local models.

Britain's public (that is, its
major independent) schools have a
conspicuous role in the country's
social system, and as a result are
the subject of a long-standing
political debate. The discussion
is generally founded on a
stereotyped image of what these
school may have been like in the
1950s - this books shows how they
were in the late 1980s. It is
based on fieldwork in two major
public boarding schools which the
author conducted over an extended
period, and draws on interviews,
observation and documentary
sources to establish a picture of
what public school life is
actually like for pupils and
staff. Since the schools were
predominantly male preserves, the
major part of the book describes
the social world and experiences
of boys and school-masters. An
important section of the book,
however, discusses the
introduction of girl pupils, the
experiences of female teachers and
the way schoolmasters' wives tend
to be drawn into their husbands'
work. Geoffrey Walford's
conclusions about life in public
schools differ considerably from
traditional expectations. At the
same time he asks whether there
really has been a 'public school
revolution'. His book makes an
important contribution to our
knowledge of public schools, to
debates in the sociology of
education and to the issues of
abolishing or extending the
independent sector.
