E.T. the Extra-Terrestrial: E.T.'s First Words Quirk Books

E.T. is the movie that created one of the most recognized icons of the twentieth century, and has become the enduring classic about a remarkable friendship between a boy and an alien visitor. And this is the only book that tells the story of how the movie was conceived and made. Here are stories from director Steven Spielberg, writer Melissa Mathison, producer Kathleen Kennedy, child stars Henry Thomas and Drew Barrymore, and members of the crew. Spielberg and Mathison tell us how E.T. evolved from Spielberg's concept into Mathison's screenplay. We learn about the mechanics of how the alien was made to walk, talk, eat, and phone home. We go on the set to discover, firsthand, how the most memorable scenes were filmed, including the scene of the boys flying over the moon and the good-bye scene that had us in tears. Lavishly illustrated, with full-color stills and behind-the-scenes photographs, *E.T. The Extra-Terrestrial from Concept to Classic* includes the complete screenplay, as well as excerpts from the reviews and feature stories that appeared when the film was first released in 1982. Here is a book that puts you in the director's chair during the making of one of the most extraordinary films ever created.

Everything I Need to Know I Learned from E.T. the Extra-Terrestrial
Jessica Kingsley Publishers

One of the world's leading scientists explains why—and how—the search for intelligent life beyond Earth should be expanded. Fifty years ago, a young astronomer named Frank Drake first pointed a radio telescope at nearby stars in the hope of picking up a signal from an alien civilization. Thus began one of the boldest scientific projects in history, the Search for Extraterrestrial Intelligence (SETI). After a half-century of scanning the skies, however, astronomers have little to report but an eerie silence—eerie because many scientists are convinced that the universe is teeming with life. Physicist and astrobiologist Paul Davies has been closely involved with SETI for three decades and

chairs the SETI Post-Detection Taskgroup, charged with deciding what to do if we're suddenly confronted with evidence of alien intelligence. He believes the search so far has fallen into an anthropocentric trap—assuming that an alien species will look, think, and behave much like us. In this provocative book Davies refocuses the search, challenging existing ideas of what form an alien intelligence might take, how it might try to communicate with us, and how we should respond if it does.

If we send a message into space, will extraterrestrial beings receive it? Will they understand? The endlessly fascinating question of whether we are alone in the universe has always been accompanied by another, more complicated one: if there is extraterrestrial life, how would we communicate with it? In this book, Daniel Oberhaus leads readers on a quest for extraterrestrial communication. Exploring Earthlings' various attempts to reach out to non-Earthlings over the centuries, he poses some not entirely answerable questions: If we send a message into space, will extraterrestrial beings receive it? Will they understand? What languages will they (and we) speak? Is there not only a universal grammar (as Noam Chomsky has posited), but also a grammar of the universe? Oberhaus describes, among other things, a late-nineteenth-century idea to communicate with Martians via Morse code and mirrors; the emergence in the twentieth century of SETI (the search for extraterrestrial intelligence), CETI (communication with extraterrestrial intelligence), and finally METI (messaging extraterrestrial intelligence); the one-way

space voyage of Ella, an artificial intelligence agent that can play cards, tell fortunes, and recite poetry; and the launching of a theremin concert for aliens. He considers media used in attempts at extraterrestrial communication, from microwave systems to plaques on spacecrafts to formal logic, and discusses attempts to formulate a language for our message, including the Astraglossa and two generations of Lincos (lingua cosmica). The chosen medium for interstellar communication reveals much about the technological sophistication of the civilization that sends it, Oberhaus observes, but even more interesting is the information embedded in the message itself. In *Extraterrestrial Languages*, he considers how philosophy, linguistics, mathematics, science, and art have informed the design or limited the effectiveness of our interstellar messaging.
