Since the publication of the Institute of Medicine (IOM) report *Clinical Practice Guidelines We Can Trust* in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a

broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these

recommendations to enhance patient care.

CPT® E/M (Evaluation and Management) codes are changing significantly for office visits for the 2021 code set year. This quick reference guide provides a side-by-side comparison of evaluation and management (E/M) codes. Easy to use, each table summarizes the requirements for reporting E/M services and helps the user select and validate proper E/M coding. The Centers for Medicare and Medicaid Services (CMS) have just issued the 2020 Medicare Physician Fee Schedule Final Rule which includes a provision that will have a significant impact on coding. The purpose of the provision is to reduce the administrative burden on physicians--an outcome that the American Medical Association has worked with many leading healthcare organizations to achieve. It does this by changing a part of the Current Procedural Terminology (CPT®) code set known as the Evaluation and Management (E/M) Office Visit codes. The new codes go into effect on January 1, 2021. FEATURES AND BENEFITS E/M 2021 code changes - new guidelines on the updated codes for office or other outpatient and prolonged services section incorporated 18 E/M tables summarizing the key components and contributory factors requirements for reporting E/M services saves time by giving an overall look at reporting requirements of frequently used codes. Required key components such as history, examination, and complexity of medical decision making to help the selection of level of E/M services.

Contributory factors such as the severity of presenting problem, counseling, and coordination of care during patient encounter are listed to help proper reporting and coding of these services when provided. The final component of time, such as bedside/unit/floor time are included as well to help in proper code selection.

A Guide to the Project Management Body of Knowledge (PMBOK® Guide) – Seventh Edition and The Standard for Project Management (RUSSIAN) Springer

Comprised of illustrative clinical cases, this unique pocket guide presents descriptions of patients who have symptoms, physical signs or laboratory abnormalities that they believe are due to disorders of the endocrine system (hormone secreting glands and overall metabolism) but which are not, or probably are not, due to an endocrine disorder. These are common situations in the clinical practice of endocrinology. Each chapter includes clinical cases illustrating differing presentations and outcomes, and each individual case description is followed by a discussion that includes the differential diagnosis of these symptoms, signs and/or lab abnormalities and why they are not likely due to endocrine disease or, alternatively, why and how a deeper exploration for endocrine disorders might be needed. In all cases, an emphasis is placed on listening to the patient and providing a respectful and compassionate response and approach to evaluation and management of the proposed disorder. Discussions are referenced whenever reference material is available, and evidence-based clinical practice guidelines are presented whenever applicable. Topics discussed include chronic and adrenal fatigue, obesity, anxiety and depression, sweating and flushing, alcohol- and opioid-induced symptoms, low testosterone, pseudo-hypoglycemia and pseudo-Cushing's syndrome, among others.

Clinical endocrinologists, primary care physicians and related allied medical professionals will find Management of Patients with Pseudo-Endocrine Disorders a valuable resource in their clinical practice with these common but often challenging patients.

Evaluation and Intervention Pocket Guide Quickstudy Reference Guides

Primary care physicians are often the first caretakers to whom patients present for chronic pain. The current literature targeted at these providers is sparse, and the existing literature is very broad and large in scope and size. There are no quick pocket guides on this topic that the general practitioner may use as a point of care reference. This first of its kind text provides a practical, hands-on approach to the evaluation and treatment of chronic pain in the family medicine setting. Divided into four main sections, the first part focuses on the general approach to any patient suffering from chronic pain. Chapters in this section include the physical exam, formulating a diagnosis, formulating a variety of treatment plans including medication, physical therapy and psychiatric therapy, and specialist referral, among others. The second section focuses on evaluation and management of the chronic pain patient who requires opioid therapy. This section includes useful guidance on how to convert into morphine equivalents, interpretation of urine drug tests, and helpful office procedures for managing refills. It gives practical guidance on how to prescribe opioid reversal agents and opioid tapering regimens. A systems based approach to managing the patient is also discussed. The third section informs the reader of viable alternative and complementary treatment options. Five main treatment types are discussed each with their own separate chapter. These include musculoskeletal-based therapy, medicinal therapies, sense-based therapy, relaxation-based therapy and physical/exercise-based therapy. Given the controversy and limited training primary care physicians have on marijuana and cannabis, one chapter is dedicated specifically to inform the primary care physician on marijuana as a medicinal therapy for chronic pain. The fourth section focuses entirely on myofascial pain and trigger point therapy. The chapters in this section teach the reader how to examine and diagnose myofascial pain and distinguish between fibromyalgia. They also provide general principles of myofascial trigger point therapy and how to practically perform these in sthe clinical setting. Topics discussed include: trigger point massage, cold and stretch, isometric contraction, trigger point injection, and ischemic compression. It also includes general instruction so that the practitioner can teach patients how to perform trigger point therapy easily in their own home. The last chapter details chronic myofascial back pain and how to examine and practically treat with trigger point therapies. Evaluation and Management of Chronic Pain is a first-of-its-kind pocket-guide text specifically designed for primary care providers. It also appeals to residents, medical students and any other professional interested in treating chronic pain.
