A laboratory study that investigates how algorithms come into existence. Algorithms--often associated with the terms big data, machine learning, or artificial intelligence--underlie the technologies we use every day, and disputes over the consequences, actual or potential, of new algorithms arise regularly. In this book, Florian Jatón offers a new way to study computerized methods, providing an account of where algorithms come from and how they are constituted, investigating the practical activities by which algorithms are progressively assembled rather than what they may suggest or require once they are assembled.

Discover ways to empower students to build confidence in sharing their learning, becoming more responsible digital citizens and evolving into classroom creators. In researching the top skills students need to succeed in the future, author Rachelle Dene Poth identified the following: ability to communicate, work in teams, think creatively, problem-solve and design. This book shows educators how to help students develop these essential skills through authentic, real-world learning experiences, building a pathway for the future of learning and work. In *Chart a New Course*, educators will get the tools they need to design more purposeful learning experiences to drive student engagement and motivation, promote creativity in learning, model risk-taking and build classroom culture. Readers will discover how these activities can be woven into instruction rather than layered on existing curriculum, with ideas for getting started; suggestions in response to the statement, "If you're doing this, try this instead;" and lessons learned along the way. The Pain and the Great One Cambridge Stratford Limited

Legends of the Northern Paiute shares and preserves twenty-one original and previously unpublished Northern Paiute legends, as told by Wilson Wewa, a spiritual leader and oral historian of the Warm Springs Paiute. These legends were originally told around the fires of Paiute camps and villages during the "story-telling season" of winter in the Great Basin of the American West. They were shared with Paiute communities as a way to pass on tribal visions of the "animal people" and the "human people," their origins and values, their spiritual and natural environment, and their culture and daily lives. The legends in this volume were recorded, transcribed, reviewed, and edited by Wilson Wewa and James Gardner. Each legend was recorded, then read and edited out loud, to respect the creativity, warmth, and flow of Paiute storytelling. The stories selected for inclusion include familiar characters from native legends, such as Coyote, as well as intriguing characters unique to the Northern Paiute, such as the creature embodied in the Smith Rock pinnacle, now known as Monkey Face, but known to the Paiutes in Central Oregon as Nuwuzoho the Cannibal. Wewa's apprenticeship to Northern Paiute culture began when he was about six years old. These legends were passed on to him by his grandmother and other tribal elders. They are now made available to future generations of tribal members, and to students, scholars, and readers interested in Wewa's fresh and authentic voice. These legends are best read and appreciated as they were told--out loud, shared with others, and delivered with all of the verve, cadence, creativity, and humor of original Paiute storytellers on those clear, cold winter nights in the high desert.

"The Protocols of the Elders of Zion" is almost certainly fiction, but its

impact was not. Originating in Russia, it landed in the English-speaking world where it caused great consternation. Much is made of German anti-semitism, but there was fertile soil for "The Protocols" across Europe and even in America, thanks to Henry Ford and others.

Think of a number between one and ten. No, hang on, let's make this interesting. Between zero and infinity. Even if you stick to the whole numbers, there are a lot to choose from - an infinite number in fact. Throw in decimal fractions and infinity suddenly gets an awful lot bigger (is that even possible?) And then there are the negative numbers, the imaginary numbers, the irrational numbers like pi which never end. It literally never ends. The world of numbers is indeed strange and beautiful. Among its inhabitants are some really notable characters - pi, e, the "imaginary" number i and the famous golden ratio to name just a few. Prime numbers occupy a special status. Zero is very odd indeed: is it a number, or isn't it? How Numbers Work takes a tour of this mind-blowing but beautiful realm of numbers and the mathematical rules that connect them. Not only that, but take a crash course on the biggest unsolved problems that keep mathematicians up at night, find out about the strange and unexpected ways mathematics influences our everyday lives, and discover the incredible connection between numbers and reality itself. How Numbers Work Irwin Professional Pub

New York Times bestselling author and social media expert Gary Vaynerchuk shares hard-won advice on how to connect with customers and beat the competition. A mash-up of the best elements of *Crush It!* and *The Thank You Economy* with a fresh spin, *Jab, Jab, Jab, Right Hook* is a blueprint to social media marketing strategies that really works. When managers and marketers outline their social media strategies, they plan for the "right hook"—their next sale or campaign that's going to knock out the competition. Even companies committed to jabbing—patiently engaging with customers to build the relationships crucial to successful social media campaigns—want to land the punch that will take down their opponent or their customer's resistance in one blow. Right hooks convert traffic to sales and easily show results. Except when they don't. Thanks to massive change and proliferation in social media platforms, the winning combination of jabs and right hooks is different now. Vaynerchuk shows that while communication is still key, context matters more than ever. It's not just about developing high-quality content, but developing high-quality content perfectly adapted to specific social media platforms and mobile devices—content tailor-made for Facebook, Instagram, Pinterest, Twitter, and Tumblr.
