Following the launch of Sputnik, the North Atlantic Treaty Organization became a prominent sponsor of scientific research in its member countries, a role it retained until the end of the Cold War. As NATO marks sixty years since the establishment of its Science Committee, the main organizational force promoting its science programs, Greening the Alliance is the first book to chart NATO ’ s scientific patronage—and the motivations behind it—from the organization ’ s early days to the dawn of the twenty-first century. Drawing on previously unseen documents from NATO ’ s own archives, Simone Turchetti reveals how its investments were rooted in the alliance ’ s defense and surveillance needs, needs that led it to establish a program prioritizing environmental studies. A long-overlooked and effective diplomacy exercise, NATO ’ s “ greening ” at one point constituted the organization ’ s chief conduit for negotiating problematic relations between allies. But while Greening the Alliance explores this surprising coevolution of environmental monitoring and surveillance, tales of science advisers issuing instructions to bomb oil spills with napalm or Dr. Strangelove — like experts eager to divert the path of hurricanes with atomic weapons make it clear: the coexistence of these forces has not always been harmonious. Reflecting on this rich, complicated legacy in light of contemporary global challenges like climate change, Turchetti offers both an eye-opening history of international politics and environmental studies and a thoughtful assessment of NATO ’ s future.

The aim of this book is to present the subject matter of arithmetic, geometry, and algebra with the utmost clarity and simplicity. It is based on the mathematical subjects required in four years of high school study and will prepare the student with the skills necessary to pass the GED Mathematics Test. The text consists of ten chapters with a review of geometry and algebra because of the many concepts introduced in these particular subjects. The last

chapter is devoted to a practice test consisting of questions and problems similar to those presented on the real GED test. Answers to the practice test are provided with detailed explanations of the suggested method of solving each problem. Each chapter opens with a brief introduction before developing the ideas and facts of the subject matter. In order to give the student an insight into the principle involved, many examples are given to provide an understanding of the topic rather than to just offer a rule. The examples enable students to proceed at their own pace, in accordance with their individual needs. Problems are then introduced for the student to solve so as to stimulate clear and organized thinking. Answers to the problems are included at the end of each chapter thus helping to reinforce the students' knowledge step by step. Due to the fact that the language is direct, and the method of presentation is concerned with essentials only, the skills can be learned by anyone willing to spend some time in self-study. Also, even though simplified, this book of mathematics is complete and authoritative. It is recommended for use in home schooling, as a supplementary text, or as a gateway to advanced math and science.
