A Guide for Practitioners Radcliffe Pub

The Gynaeciorum libri, the 'Books on [the diseases of] women,' a compendium of ancient and contemporary texts on gynaecology, is the inspiration for this intensive exploration of the origins of a subfield of medicine. This collection was first published in 1566, with a second edition in 1586/8 and a third, running to 1097 folio pages, in 1597. While examining the origins of the compendium, Helen King here concentrates on its reception, looking at a range of different uses of the book in the history of medicine from the sixteenth to the nineteenth century. Looking at the competition and collaboration among different groups of men involved in childbirth, and between men and women, she demonstrates that arguments about history were as important as arguments about the merits of different designs of forceps. She focuses on the eighteenth century, when the 'man-midwife' William Smellie found his competence to practise challenged on the grounds of his allegedly inadequate grasp of the history of medicine. In his lectures, Smellie remade the 'father of medicine', Hippocrates, as the 'father of midwifery'. The close study of these texts results in a fresh perspective on Thomas Laqueur's model of the defeat of the one-sex body in the eighteenth century, and on the origins of gynaecology more generally. King argues that there were three occasions in the history of western medicine on which it was claimed that women's difference from men was so extensive that they required a separate branch of medicine: the fifth century BC, and the sixteenth and nineteenth centuries. By looking at all three occasions together, and by tracing the links not only between ancient Greek ideas and their Renaissance rediscovery, but also between the Renaissance compendium and its later owners, King analyzes how the claim of female 'difference' was shaped by specific social and cultural conditions. Midwifery, Obstetrics and the Rise of Gynaecology makes a genuine contribution not only to the history of medicine and its subfield of gynaecology, but also to gender and cultural studies.

"A report on the prevalence of female circumcision and female genital mutilation (FC/FGM). In seeking to help eliminate the practice, the work places it firmly in a human rights and legal framework. The authors: describe FC/FGM, its history, its consequences for health and the reasons used to justify it; examine the history of the movement working to combat it; and present data from 40 case studies, North and South, covering prevalence, legal measures and other state steps towards eradication, campaigns and prosecutions. The book shows that, in spite of an extensive and growing African movement to combat FC/FGM, its prevalence is still very high indeed. It is primarily the countries of the North which have the most developed and explicit laws against the practice of FC/FGM, but directed only at their immigrant populations - a fact which throws up one of the classic dilemmas of human rights work. The authors suggest a solution through the implementation of human rights treaties, and make recommendations for action by governments, the international community, and non-governmental institutions."--publishers website.
