Appropriate as a textbook for courses in cognitive psychology or social cognition, Everyday Thinking reviews the rapidly growing literature on cognition in naturalistic settings. It differs from other textbooks in that, where possible, it focuses on thinking in real-world settings rather than in controlled laboratory settings and provides detailed treatments of each of the following topics: * how we form impressions of and represent persons in memory; * how we recognize and represent faces; * how we reason in our day-to-day lives and go about solving everyday problems; * how we make judgments and decisions; * how we encode memories of events--both for future action and for our own life histories; and * what are some of the implications of everyday knowledge and cognition for education and instruction. This book presents the theoretical positions and research evidence on each of these topics and examines the generally unexplored connections among them. As a result, this book presents the study of cognition in a more relevant form and in a context that readers can more readily apply to their own lives.

Accounting sustainably involves accounting for and to the natural environment, and accounting for and to society, including groups currently oppressed or disadvantaged by unsustainable processes and practices. This book creates a compelling case for the inclusion of sustainability at the heart of accounting educational programmes, offering critical lessons and identifying risks to avoid when designing accounting programmes and courses. Accounting sustainability has moved from the side-lines of policy discourses, accounting institutions, professional accounting practices, and research activities into the mainstream. The chapters in this proposed book engage in a critical dialogue to facilitate change in accounting education for sustainability. They dispel the myth that accounting for sustainability is an oxymoron, bad for business, unrelated to practice, or contrary to professional accounting bodies ' accreditation requirements. This book was originally published as a special issue of Accounting Education.

Earth science is becoming increasingly quantitative in the digital age. Quantification of geoscience and engineering problems underpins many of the applications of big data and artificial intelligence. This book presents quantitative geosciences in three parts. Part 1

presents data analytics using probability, statistical and machine-learning methods. Part 2 covers reservoir characterization using several geoscience disciplines: including geology, geophysics, petrophysics and geostatistics. Part 3 treats reservoir modeling, resource evaluation and uncertainty analysis using integrated geoscience, engineering and geostatistical methods. As the petroleum industry is heading towards operating oil fields digitally, a multidisciplinary skillset is a must for geoscientists who need to use data analytics to resolve inconsistencies in various sources of data, model reservoir properties, evaluate uncertainties, and quantify risk for decision making. This book intends to serve as a bridge for advancing the multidisciplinary integration for digital fields. The goal is to move beyond using quantitative methods individually to an integrated descriptive-quantitative analysis. In big data, everything tells us something, but nothing tells us everything. This book emphasizes the integrated, multidisciplinary solutions for practical problems in resource evaluation and field development.

"The perfect handbook for understanding what constitutes moral relations with friends, enemies, and one's own self." —Booklist In an age when most of us spend more time thinking about what movie we'll see than about how we want to lead our lives, nothing could be more timely and helpful than *Everyday Ethics*. In this refreshingly original book, Joshua Halberstam shows us how to develop a moral imagination—and have fun while doing it. Halberstam demolishes the clichés of both religion and psychotherapy and entices us into looking at the small actions that make up the big picture of our character and values. Should we really refrain from making judgments? Should we let our conscience be our guide even if it urges us not to pay our taxes? Halberstam has something intriguing to say about these and many other issues. Witty and entertaining, *Everyday Ethics* is the moral equivalent of an aerobic dance session, as exhilarating as it is instructive.
