Natural Selection and Evolution Webquest - Introduction

Charles Darwin WebQuest Name: Directions: Go to the webpages listed below and answer the following questions using the information on those pages. ... What year did Darwin first propose the Theory of Evolution through Natural Selection and who was his collaborator? 5. What was the name of his most famous book, when was it published, and why did ... Evolution And Natural Selection Webquest On this WebQuest adventure we will be expanding our knowledge and diving into natural selection and evolution. The purpose of this WebQuest is to learn more about natural selection. Our focus question is "What big factors have caused the evolution and diversity of organisms?" Objectives: 1. Describe the important observations that Darwin made on his voyage and what struck him about his observations. 2. Explain how natural selection leads to evolution. 3.

WebQuest: Evolution and Natural Selection Process. Follow the step by step web-quest and answer all the questions that are on this page, including the downloadable web documents with additional activities. There are web pages and interactive pages as well as a video and games to play that will all help in your understanding of the theory of evolution and the process of natural selection. You must use either your exercise book or a Microsoft word document to take down the information.

Natural Selection Webquest & Worksheets | Teachers Pay ...

In this webquest, students will learn about the process of natural selection and how it is the basis for evolution. They will outline events in the evolution of life on earth from the first unicellular organism to the first multicellular organism and they will learn what evidence has led to our understanding of how life evolved and how new evidence is changing our view of the relatedness of organisms. Hazleton Area School District / Overview Living things have slowly evolved and adapted to changes in the natural world. Evolution is the process through which species change over time. The basis for the theory of evolution came from observation by Charles Darwin. Darwin proposed that evolution could be explained through a process he called natural selection.
