Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Different characteristics tend to exist within any given population as a result of mutation, genetic recombination and other sources of genetic variation.

[Natural Selection Lesson Plans: Adaptation, Evolution Evidence](#)

In his book *The Origin of Species*, Darwin presented evidence for his "descent with modification" theory, which has come down to us as the theory of evolution, although Darwin avoided the term "evolution." Essentially, Darwin suggested that random variations take place in living things and that the environment selects those individuals better able to survive and reproduce.

A great evolution experiment is for students to make observations of bone structures of different animals. An example natural selection activity lets students mimic bacteria becoming immune to antibiotics. Evolution worksheets and exam / test / quiz questions also provide help with evaluating the student's progress.
