on IBM's own transformation, and partly on the transformations that IBM has helped its clients to achieve, this ground-breaking book shows how companies can increase sales and improve margins by introducing a range of solutions. Highly readable, motivational and fast-paced, *Business Solutions On Demand* is packed with examples from many diverse industries. The authors emphasize that for today's business to compete and survive, it has to exceed the expectations of its customers. Technological advancement, globalization, increased competition, market

saturation and easy access to information are all conspiring to make traditional business models redundant.

The worldwide increase in societal challenges, such as climate change, political instability, and economic volatility, puts pressure on institutions, organisations, and individuals to develop means to address social problems.

Unfortunately, many organisations fail to adequately formulate social problems and even solve the wrong ones, which is due to their inherent complexity. Consequently, this dissertation adopts a 'complexity lens' to interpret the intertwined forces driving social problems within organisational and environmental contexts. Problem complexity requires different governance modes, as solutions cannot be developed in the typical linear and hierarchical process that commercial products follow. To this end, this

---

dissertation entails two studies that explore how the complexity of social problems can be managed at the organisational and individual level. In particular, study 1 employs Procedural Action Research and mixed methods together with a humanitarian organisation to qualitatively develop and quantitatively validate a theory-guided bottom-up search process for surfacing solutions to reoccurring floods in Indonesia. In a similar vein, study 2 investigates and compares the individual innovation processes of 20 social entrepreneurs from Ethiopia and Germany.

as change agents and the unique set of responsibilities that we assume in that role. An earlier volume in the Research in Management Consulting series, -- Emerging Trends in Management Consulting -- focused on the Janus-faced nature of management consulting. Janus, the Roman god of doorways and gateways, looking backwards and forwards with contrasting perspectives—beginnings and endings, comedy and tragedy, good and evil – is a useful analogy to capture the multidimensional nature—positive and negative—of the consulting realm. For all the challenges and shortcomings the field of OD and change might encompass, there are also those magical moments when our

interventions succeed, when our efforts truly enhance organizational performance, and when organizational members grow, develop, and become more satisfied with their roles and activities. The reality is that the latter demands our conscious attention, commitment, and, to some degree, sacrifice. When we are less thoughtful than we should be, when we are distracted by other commitments and obligations, or when we find ourselves in situations where we are less than prepared is when Janus' other face materializes. The volume explores the possibilities and challenges inherent in OD intervention and change initiatives.

Citizen science, the active participation of the public in scientific research projects, is a rapidly expanding field in open science and open innovation. It provides an integrated model of public knowledge production and engagement with science. As a growing worldwide phenomenon, it is invigorated by evolving new technologies that connect people easily and effectively with the scientific community. Catalysed by citizens' wishes to be actively involved in scientific processes, as a result of recent societal trends, it also offers contributions to the rise in tertiary education. In addition, citizen science provides a valuable tool for citizens to play a more active role in sustainable development. This book identifies and explains the role of citizen science within innovation in science and society, and as a vibrant

and productive science-policy interface. The scope of this volume is global, geared towards identifying solutions and lessons to be applied across science, practice and policy. The chapters consider the role of citizen science in the context of the wider agenda of open science and open innovation, and discuss progress towards responsible research and innovation, two of the most critical aspects of science today.

For patients and their loved ones, no care decisions are more profound than those made near the end of life.

Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying

in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and

Good Strategy/Bad Strategy clarifies the muddled thinking underlying too many strategies and provides a clear way to create and implement a powerful action-oriented strategy for the real world.

Developing and implementing a strategy is the central task of a leader. A good strategy is a specific and coherent response to—and approach for—overcoming the obstacles to progress. A good strategy works by harnessing and applying power where it will

have the greatest effect. Yet, Rumelt shows that there has been a growing and unfortunate tendency to equate Mom-and-apple-pie values, fluffy packages of buzzwords, motivational slogans, and financial goals with “strategy.” In Good Strategy/Bad Strategy, he debunks these elements of “bad strategy” and awakens an understanding of the power of a “good strategy.” He introduces nine sources of power—ranging from using leverage to effectively focusing on growth—that are eye-opening yet pragmatic tools that can easily be put to work on Monday morning, and uses fascinating examples from business, nonprofit, and military affairs to bring its original and pragmatic ideas to life. The detailed examples range from Apple to General Motors, from the two Iraq wars to Afghanistan, from a small local market to Wal-Mart,

---

from Nvidia to Silicon Graphics, from the Getty Trust to the Los Angeles Unified School District, from Cisco Systems to Paccar, and from Global Crossing to the 2007 – 08 financial crisis.

Reflecting an astonishing grasp and integration of economics, finance, technology, history, and the brilliance and foibles of the human character, *Good Strategy/Bad Strategy* stems from Rumelt ' s decades of digging beyond the superficial to address hard questions with honesty and integrity.

This book illustrates how to design and implement co-creation, a powerful form of collective creativity that harnesses the potential of teams and can generate breakthrough insights. Skilled leaders and facilitators can utilize this approach to unleash the creative potential of their organizations.

Drawing from years of applied research, the authors bring together insights from the fields of design and organizational development into an evocative and pragmatic “ how-to ” guidebook. Taking a human-centred rather than process oriented perspective, the book argues that experience design separates true co-creation from other forms of collective efforts and design thinking. Collective moments of creative insight emerge from the space between, an experience of flow and synchronicity from which new ideas spring forth. How to create and hold this space is the secret to the art of co-creation. Collective breakthroughs require stakeholders to undergo a journey from the world of their existing expertise into spaces of new potential. It requires leaders moving from a position of dominating space to holding the space for others, and developing core capacities such

---

as empathy and awareness so that teams can engage each other co-creatively. This book uncovers the secrets of this journey, enabling process designers to develop more effective programs.

Contemporary Strategy Analysis and Cases Springer Science & Business Media Organizations invest immense amounts of time, resources, and attention in their software projects. But all too often, when it's time to transfer the finished project to new "owners," they settle for the most superficial classroom training, documentation, and code walkthroughs. These conventional approaches to knowledge transfer often fail, dramatically reducing the value of new systems in production. You can do much better - and Software Ownership Transfer will show you how. This is the first practical, hands-on guide to knowledge transfer in today's

agile environments. Using a realistic, large-scale case study, ThoughtWorks expert Vinod Sankaranarayanan shows how to elevate knowledge transfer from "necessary evil" to an activity full of agility and innovation, and bring together multiple organizations and cultures to make ownership transfer work.

Sankaranarayanan explains why mere documentation of error reports and processes isn't enough, and shows how to successfully craft a knowledge transfer program that's more substantive and effective.

Along the way, he offers guidance on overcoming the commercial compromises and personal tensions often associated with transferring systems to new ownership; and on transforming mere "knowledge transfer" into something much better: "taking ownership."
