Rapid—and seemingly accelerating—changes in the economies of developed nations are having a proportional effect on the skill sets required of workers in many new jobs. Work environments are often technology-heavy, while problems are frequently ill-defined and tackled by multidisciplinary teams. This book contains insights based on research conducted as part of a major international project supported by Cisco, Intel and Microsoft. It faces these new working environments head-on, delineating new ways of thinking about '21st-century' skills and including operational definitions of those skills. The authors focus too on fresh approaches to educational assessment, and present methodological and technological solutions to the barriers that hinder ICT-based assessments of these skills, whether in large-scale surveys or classrooms.

Equally committed to defining its terms and providing practical solutions, and including international perspectives and comparative evaluations of assessment methodology and policy, this volume tackles an issue at the top of most educationalists' agendas.

Princeton Review AP Human Geography Prep, 2021 Disha Publications

This book de-myths the oft repeated claim of 'natural disaster' and puts forward socio-economic factors as the cause for the recurrence of disasters. With this framework, the author examines the popular notion of the Vulnerable India in psycho-geographical terms and unmask the dimensions of vulnerability itself. In doing so the author foregrounds the factors that create and perpetuate vulnerability of the marginalized sections of the society and of the nation and redefines the phrase Vulnerable India. Presenting a national level inquiry, the three sections of the book called the Fact, Response, and Reality, spell a convincing argument for why disasters recur in India. To provide a historical understanding of India's continued failure to adequately contain damage to life and property, the book unravels the perceptions of disasters in traditional, colonial and modern India. It redefines the debate on new terms such as 'disasterscape', 'the killed', 'disaster index', 'disaster divide' and 'vulnerability clusters' to better represent the patterns that engender vulnerability. With the aid of exhaustive research, comparative statistical analyses and illustrative maps, it provides incisive insight into 16 different geophysicals across 594 districts of the country. This book is ideal for students of geography, environmental sociology, development studies, social work and disaster management, and also for policy makers.
