Rapid—and seemingly accelerating—changes in the economies of developed nations are having a proportional effect on the skill sets required of workers in many new jobs. Work environments are often technology-heavy, while problems are frequently ill-defined and tackled by multidisciplinary teams. This book contains insights based on research conducted as part of a major international project supported by Cisco, Intel and Microsoft. It faces these new working environments head-on, delineating new ways of thinking about ‘21st-century’ skills and including operational definitions of those skills. The authors focus too on fresh approaches to educational assessment, and present methodological and technological solutions to the barriers that hinder ICT-based assessments of these skills, whether in large-scale surveys or classrooms. Equally committed to defining its terms and providing practical solutions, and including international perspectives and comparative evaluations of assessment methodology and policy, this volume tackles an issue at the top of most educationalists’ agendas.

## The Rise of Technological Power in the South Barrons Educational Series

In the West, a specific ideal for female genitalia has emerged: one of absence, a "clean slit," attained through the removal of pubic hair and, increasingly, through female genital cosmetic surgery known as FGCS. In *The Perfect Vagina: Cosmetic Surgery in the Twenty-First Century*, Lindy McDougall provides an ethnographic account of women who choose FGCS in Australia and the physicians who perform these procedures, both in Australia and globally, while also examining the environment in which surgeons and women come together. Physicians have a vested interest in establishing this surgery as valid medical intervention, despite majority medical opinion explicitly acknowledging that a wide range of genital variation is normal. McDougall offers a nuanced picture of why and how these procedures are performed and draws parallels between FGCS and anthropological discussions of female genital circumcision (cutting). Using the neologism biomagical, she argues that cosmetic surgery functions as both ritual and sacrifice due to its promise of transformation

---

while simultaneously submitting the body to the risks and pain of surgery, thus exposing biomedicine as an increasingly cultural and commercial pursuit. The Perfect Vagina highlights the complexities involved with FGCS, its role in Western beauty culture, and the creation and control of body image in countries where self-care is valorized and medicine is increasingly harnessed for enhancement as well as health.
