Notes to Guide Students Reading Primary Literature (with Teaching Tips for Faculty Members) SAGE Publications

How to Critique Journal Articles in the Social Sciences, by Scott R. Harris, is a brief, introductory book that provides readers with a step-by-step guide to reading and understanding a social science research article. The author demonstrates the many strengths of social research, including its advantages over ordinary ways of knowing things, and, at the same time, points out that research is inevitably flawed. Rather than naively assuming that good research simply produces “The Truth” or cynically asserting that research is hopelessly biased and futile, this book instills in readers a critical perspective—one that appreciates the strengths and weaknesses of any piece of scholarship.

Voted America's Best-Loved Novel in PBS's *The Great American Read* Harper Lee's Pulitzer Prize-winning masterwork of honor and injustice in the deep South—and the heroism of one man in the face of blind and violent hatred *One of the most cherished stories of all time, To Kill a Mockingbird* has been translated into more than forty languages, sold more than forty million copies worldwide, served as the basis for an enormously popular motion picture, and was voted one of the best novels of the twentieth century by librarians across the country. A gripping, heart-wrenching, and wholly remarkable tale of coming-of-age in a South poisoned by virulent prejudice, it views a world of great beauty and savage inequities through the eyes of a young girl, as her father—a crusading local lawyer—risks everything to defend a black man unjustly accused of a terrible crime.

Reading Critically at University Cengage AU

Charlotte Perkins Gilman's 1892 short story, *The Yellow Wallpaper* is a valuable piece of American feminist literature that reveals attitudes toward the psychological health of women in the nineteenth century. Diagnosed with "temporary nervous depression - a slight hysterical tendency" by her physician husband, a woman is confined to an upstairs bedroom.

Descending into psychosis at the complete lack of stimulation, she starts obsessing over the room's yellow wallpaper: "It is the strangest yellow, that wall-paper! It makes me think of all the yellow things I ever saw - not beautiful ones like buttercups, but old foul, bad yellow things. But there is something else about that paper - the smell! ... The only thing I can think of that it is like is the color of the paper! A yellow smell."

Understanding by Design Routledge

This graduate level nursing research textbook continues the expansion of coverage on qualitative research, including important issues for specific qualitative traditions such as grounded theory, phenomenology and ethnography. Developing solid evidence for practice will be emphasized throughout the text, and important evaluative concepts like reliability, validity, and trustworthiness will be introduced. Other new features include stronger international content (with an emphasis on Canadian and Australian research), inclusion of “tips” in boxes located in appropriate places throughout the chapters, and the use of summary bullet points. The Philosophy and Practice of Assessment and Evaluation in Higher Education Learning Matters

In this comprehensive resource, Raymond J. Wlodkowski and Margery B. Ginsberg describe how to meet the challenge of teaching intensive and accelerated courses to nontraditional learners and working adults. By making motivation and cultural relevance essential to instruction, they clearly show what instructors can do to enhance learning in classes that can last from three to six hours.

Teaching Intensive and Accelerated Courses makes full use of the authors' twenty years of experience researching and teaching accelerated courses, along with selected strategies from Wlodkowski's classic *Enhancing Adult Motivation to Learn*, to offer tried-and-true practices instructors can use to provide continuously engaging learning. Praise for *Teaching Intensive and Accelerated Courses* "Part-time teachers who work in accelerated degree programs are an enormous—and grossly underserved—group of adult education faculty. In this indispensable text, Wlodkowski and Ginsberg, two teachers with extensive firsthand experience of accelerated learning formats, provide an accessible, practical, and highly readable guide to engaging learners in these programs. Warm, wise, and down-to-earth, this will be an invaluable resource for teachers in these programs and for faculty developers everywhere."—Stephen D. Brookfield, Distinguished University Professor, University of St. Thomas, Minnesota "Whether you are an experienced teacher of accelerated courses or about to become a new one, I can't think of a better guide and standard-setter than this book. Wlodkowski and Ginsberg have created an instructional theory with practices that mirror the very principles and processes they advocate. Central to their thesis is the need to create conditions that will allow adults' natural desire to learn to emerge; in my view, this perspective is often lost in adult learning courses in the name of efficiency or productivity. That is one of the many reasons this book is refreshing in both its approach and the values it espouses."—Pamela Tate, president and CEO, The Council for Adult and Experiential Learning "What a helpful resource for faculty professional development! The information is strategic without being formulaic. New faculty can use this book as a resource to design their materials and to use their existing skills to help adults learn. The parts of this book that focus on graduate students are extremely insightful."—Victoria Gardner, director, Office of Multicultural Affairs, University of Washington School of Medicine

Fosters fundamental skills needed to critically evaluate evidence from published research studies
This is the first resource to provide APRN students and practicing clinicians with a step-by-step guide to critically analyze evidence from research studies. As part of a profession that relies on best evidence, nurses need to be able to effectively assess research articles. Equipped with these skills, nurses will lead an informed practice and improve patient care. With 14 qualitative and quantitative studies, chapters use previously published research articles to demonstrate the actual critique process. This text delves past outlining the elements of critique to teach by example, walking through every part of a research article, from the title to the conclusion, and highlighting specific queries which need to be answered to craft a strong critique. The research articles in this book offer a broad range of clinical areas and diverse methodologies to highlight the fundamental differences between qualitative and quantitative studies, their underlying paradigms and relative strengths and weaknesses. With a consistent, robust critiquing template, this content can easily be applied to countless additional research studies. Key Features: Comprises the only text to offer research critiques in nursing Provides actual examples of critiques of published research papers by experienced nurse researchers and educators Showcases a diverse range of research studies Structures critiques consistently to enable replication of the process Useful to hospitals, especially those with Magnet certification.

While addressing a wide readership, this book focuses particularly on the nurse clinician and student, demonstrating how a humanistic philosophy and research methodology has the potential to illuminate the deeper meanings of health crises and universal human experiences like pain and spiritual distress.

Evidence-based Practice in Nursing Springer Science & Business Media

"The motivation for this book was the realization that although many academics and others are called on to do reviewing, very few of them have any formal training, or sometimes, informal training, in how to referee. We who write all know how disconcerting it is to get a review that is either mindless or worse, savage. The goal of this book is to teach anyone who does reviewing the basic skills needed to be a competent reviewer. These skills include competence in evaluating psychological work and competence in communicating that evaluation. The chapters cover a wide variety of review types, ranging from reviewing articles to reviewing grant proposals to reviewing book proposals. This book is for anyone who needs to review and who wants to ensure that he or she writes the same kind of review he or she would hope to receive"--Preface. A Critical Guide Routledge

Given the explosion of information and knowledge in the field of Life Sciences, adapting primary literature as materials in course work as part of active learning seems to be more effective in improving scientific literacy among science undergraduates than the pure transmission of content knowledge using traditional textbooks. In addition, students also read research articles as part of undertaking laboratory research projects useful for preparing them for graduate school. As such, a good grasp of reading and analytical skills is needed for students to understand how their research project contributes to the field that they are working in. Such skills are being taught at UK and USA universities. In Asia, this approach in teaching has not yet been as widespread, although similar ideas are beginning to be used in education. Written as a quick guide for undergraduate students and faculty members dealing with scientific research articles as part of a module or research project, this book will be useful, especially in Asia, for students and faculty members as the universities look to incorporating the use of scientific research articles in their undergraduate teaching. For Life Science students, the first time they encounter a primary literature can be rather daunting, though with proper guidance, they can overcome the initial difficulties and become confident in dealing with scientific articles. This guidebook provides a structured approach to reading a

research article, guiding the reader step-by-step through each section, with tips on how to look out for key points and how to evaluate each section. Overall, by helping undergraduate students to overcome their anxieties in reading scientific literature, the book will enable the students to appreciate better the process of scientific investigations and how knowledge is derived in science.

Lecture Notes on Paper Critique SAGE Publications

A practical, down-to-earth guide for those who work in teaching and learning in universities, this book will be indispensable reading for those who would like to carry out action research on their own practice. Lin S Norton's concept of 'pedagogical action research' has come from over twenty years' experience of carrying out such research, and more than six years of encouraging colleagues to carry out small scale studies at an institutional, national and international level. This accessible text illustrates what might be done to improve teaching/supporting learning by carrying out action research to address such questions such as: What can I do to enthuse my students? What can I do to help students become more analytical? How can I help students to link theory with their practice? What can I do to make my lecturing style more accessible? What is going wrong in my seminars when my students don't speak? Action Research for Teaching and Learning offers readers practical advice on how to research their own practice in a higher education context. It has been written specifically to take the reader through each stage of the action research process with the ultimate goal of producing a research study which is publishable. Cognisant of the sector's view on what is perceived to be 'mainstream research', the author has also written a substantial theoretical section which justifies the place of pedagogical action research in relation to reflective practice and the scholarship of teaching and learning.
