The Challenge Built to Last, the defining management study of the nineties, showed how great companies triumph over time and how long-term sustained performance can be engineered into the DNA of an enterprise from the verybeginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring greatness? The Study For years, this question preyed on the mind of Jim Collins. Are there companies that

defy gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock returns that beat the general stock market by an average of seven times in fifteen years, better than twice the results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was different?

Why did one set of companies become truly great performers while the other set remained only good? Over five years, the team analyzed the histories of all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type of leadership required to achieve greatness. The Hedgehog Concept (Simplicity within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of

entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch radical change programs and wrenching restructurings will almost certainly fail to make the leap. “ Some of the key concepts discerned in the study, ” comments Jim Collins, “fly in the face of our modern business culture and will, quite frankly, upset some people. ” Perhaps, but who can afford to ignore these findings? When nomad artist and free spirit Dan Price began jotting down his musings in the form of whimsical drawings and inspired prose, he hardly could have imagined that his self-published journal-zine, the MOONLIGHT CHRONICLES, would earn him a cult following across the country. Now in its twentieth edition, the MOONLIGHT CHRONICLES has

brought Dan's creed of "truth, beauty, and really big sabbaticals from the convention of life" to thousands across the country. With such a following, Dan figured it was time to collect his offbeat observations into book form in hopes of inspiring other would-be journal writers to take pen, camera, and brush in hand. As Dan is fond of noting "Seems there's tons of empty journal books, but not too many on how to fill 'em up!" In HOW TO MAKE A JOURNAL, Dan answers the call, teaching readers how to tap into those pent-up creative juices and collect their life experiences on paper.

It's hard to conceive of a topic of more broad and personal interest than the study of the mind. In addition to its traditional investigation by the disciplines of psychology, psychiatry, and neuroscience, the mind has also been a focus of study in the fields of philosophy, economics, anthropology, linguistics, computer science,

molecular biology, education, and literature. In all these approaches, there is an almost universal fascination with how the mind works and how it affects our lives and our behavior. Studies of the mind and brain have crossed many exciting thresholds in recent years, and the study of mind now represents a thoroughly cross-disciplinary effort. Researchers from a wide range of disciplines seek answers to such questions as: What is mind? How does it operate? What is consciousness? This encyclopedia brings together scholars from the entire range of mind-related academic disciplines from across the arts and humanities, social sciences, life sciences, and computer science and engineering to explore the multidimensional nature of the human mind.

A Common Core Exemplar Text by an award-winning author-illustrator team Tom á s is a son of migrant workers. Every summer he and his family

follow the crops north from Texas to Iowa, spending long, arduous days in the fields. At night they gather around to hear Grandfather's wonderful stories. But before long, Tom á s knows all the stories by heart. "There are more stories in the library," Papa Grande tells him. The very next day, Tom á s meets the library lady and a whole new world opens up for him. Based on the true story of the Mexican-American author and educator Tom á s Rivera, a child of migrant workers who went on to become the first minority Chancellor in the University of California system, this inspirational story suggests what libraries--and education--can make possible. Raul Col ó n's warm, expressive paintings perfectly interweave the harsh realities of Tom á s's life, the joyful imaginings he finds in books, and his special relationships with a wise grandfather and a caring librarian. "A gentle text and innovative artwork. . . . While young readers and future librarians will find this an inspiring tale, the end note gives it a real kick: the story is based on an actual migrant worker [Tom á s Rivera] who became

chancellor of a university--where the library now bears his name."--Publishers Weekly

Very few studies have examined the worldview of the Anishinaabeg from within the culture itself and none have explored the Anishinaabe worldview in relation to their efforts to maintain their culture in the present-day world. Focusing mainly on the Minnesota Anishinaabeg, Gross explores how their worldview works to create a holistic way of living, which the Anishinaabeg call the Good Life. However, as Gross also argues, the Anishinaabeg saw the end of their world early in the 20th century and experienced what he calls 'postapocalypse stress syndrome.'

Contributors: Ruth Belling, Michelle Butler, Catherine Comiskey, Siobhan Corrigan, Gloria Crispino, Orla Dempsey, Suzanne Guerin, Maree Johnson, Carmel Kelly, Elaine Lehane, Maria Lohan, Susan McLaren, Deirdre Mongan, Corina Naughton, Rhona O'Connell, Elaine Pierce, Gary Rolfe, Eileen Savage, Anne Scott, Emma Stokes, Roger Watson " " Learning quantitative research is taken much for granted. This is probably why there are fewer generic books on quantitative than qualitative research. This book is long overdue. Clearly- written and well structured, it takes us through the whole journey of a research project from developing 'research questions' to 'presenting the findings', passing through philosophical underpinnings, recruitment of participants and ethical considerations. Written by an array of well-known researchers and teachers, this book will certainly appeal to new as well as seasoned researchers. Those who will use it, will not be disappointed." Kader Parahoo, University of Ulster "The title of this text is somewhat misleading. It is not only an excellent and thorough guide to qualitative health research methods; it is also an excellent introduction to all forms of qualitative research. It takes the reader gently through theoretical and ethical concerns to the practicalities and benefits of utilising qualitative approaches. As such it is that rare thing; a text that can be used by novice researchers to learn their craft, and a

key reference resource for experienced research practitioners." Dr. John Cullen, School of Business, National University of Ireland, Maynooth, UK "This is a first-rate collection of essays that promotes an informed understanding of both underpinning principles and widely used techniques. A great deal of effort has clearly been invested in coordinating the contributions, and this has delivered clarity, complementarity and effective coverage. This is a welcome, carefully-crafted and very accessible resource that will appeal to students and researchers in healthcare and beyond."
