Adult Review of Systems (ROS) Overview. The review of systems (or symptoms) is a list of questions, arranged by organ system, designed to uncover dysfunction and disease. It can be applied in several ways: As a screening tool asked of every patient that the clinician encounters.

Problem points, E/M Coding Education, EM evaluation and ...

There is a fine line between the signs and symptoms that patient shares in the HPI and those obtained via the ROS. The ROS is a distinct review of systems. For example: if the documentation reads 'patient states that her hip has been painful' credit is not given in both the HPI 'location' and to the (MS) review of systems."

DOCUMENTATION OF MEDICAL NOTES - ww2.nasbhc.org

It is still acceptable to use the statement, " All other systems were reviewed and are negative. "

But a word of caution: When using the " all other systems reviewed and negative " statement, make sure you ' re performing a 10-plus system review. The statement is a documentation shortcut, not a performance one, and physicians still need to review at least 10 systems. Also, your documentation should clearly communicate performing a " complete " review of systems.

Example Of Review Systems Documentation

Review of Systems There are three types of ROS: Problem Pertinent – inquires about the system directly related to the problems identified in the HPI. Extended ROS – adds a limited number of additional systems. Complete ROS – inquires about the system(s) directly related to the problems identified in the HPI plus all
