The book explores a cognitive load  
perspective on instructional guidance.

Cognitive load theory is focused on  
instructional design implications and  
prescriptions that flow from human  
cognitive architecture, and it has become  
one of the leading theories of instructional  
design. According to this theoretical  
perspective, the purpose of instructional  
guidance is to reduce learner potential  
cognitive overload by providing appropriate  
information in the right time and in a

suitable format. As the learner's level of  
prior knowledge is considered as the main  
factor influencing this decision, the effect of  
learner prior knowledge on effectiveness of  
instructional methods (the expertise  
reversal effect in cognitive load theory)  
provides the basic framework for the book.  
The fully-guided direct instruction and  
minimally-guided inquiry (discovery or  
exploratory) learning are often discussed in  
instructional psychology literature as  
examples of approaches with opposed  
degrees of guidance provided to the  
learners. This book considers the whole  
range of the levels of guidance (including  
intermediate levels) and approaches the  
problem of balancing learner guidance from  
a cognitive load perspective. The  
significance of this approach is in applying

---

our current knowledge of human cognitive architecture to develop an integrated instructional approach bringing together the best features and advantages of direct instruction and inquiry learning. Both direct instruction and inquiry learning approaches have been around for long time, and their proponents can produce evidence of their effectiveness. This evidence needs to be treated within the context of appropriate learning goals in specific instructional settings for specific types of learners. This book provides an unbiased theoretical framework for managing learner instructional guidance and working principles for selecting appropriate levels and methods of instructional guidance (e.g., sequences of exploratory problems and explicit instruction; forms and levels of embedded guidance; and adapting methodologies) optimal for learners at different levels of prior knowledge.
