The provocative debate about
Malcolm X's legacy that
emerged after the publication
of Manning Marable's 2011
biography raised critical
questions about the
revolutionary Black
Nationalist's importance to
American and world affairs:
What was Malcolm's
association with the Nation
of Islam? How should we
interpret Malcolm's

discourses? Was Malcolm antifeminist? What is Malcolm's legacy in contemporary public affairs? How do Malcolm's early childhood experiences in Michigan shape and inform his worldview? Was Malcolm trending toward socialism during his final year? Malcolm X's Michigan Worldview responds to these questions by presenting Malcolm's subject as an iconography used to deepen understanding of African descendent peoples' experiences through advanced research and disciplinary study. A Black studies reader that uses the biography of Malcolm X both to interrogate key aspects of the Black world experience and to contribute to the intellectual expansion of the discipline, the book presents Malcolm as a Black subject who represents, symbolizes, and associates meaning with the Black/Africana studies discipline. Through a range of multidisciplinary prisms and themes including discourse, race, culture, religion, gender, politics, and community, this rich volume elicits insights about the Malcolm iconography that contribute to the continuous formulation, deepening, and strengthening of the Black studies discipline.

A mainstay of functional linguistics has been the claim that linguistic elements and patterns that are frequently used in discourse become conventionalized as grammar. This book addresses the two issues that are basic to this claim: first, the question of what types of elements are frequently used in discourse and second, the question of how frequency of use affects cognitive representations. Reporting on evidence from natural conversation, diachronic change, variability, child language acquisition and psycholinguistic experimentation the original articles in this book support two major principles. First, the content of people's interactions consists of a preponderance of subjective, evaluative statements, dominated by the use of pronouns, copulas and intransitive clauses. Second, the frequency with which certain items and strings of items are used has a profound influence on the way language is broken up into chunks in memory storage, the way such chunks are related to other stored material and the ease with which they are accessed to produce new utterances.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

The papers in this volume are linked by a common concern, which is at the centre of current linguistic enquiry: how do we classify and categorize linguistic data, and how does this process add to our understanding of linguistic change? The scene is set by Aitchison 's paper on the development of linguistic categorization over the past few decades, followed by Biggam 's critical overview of theoretical developments in colour semantics. Lexical classification in action is discussed in papers by Fischer, Kay and Sylvester on the structures of thesauruses, while detailed treatments of particular semantic areas are offered by Kleparski, Miko ł ajczuk, O ' Hare and Peters. Papers by Lass, Laing and Williamson, and Smith are concerned with the nature of linguistic evidence in the context of the historical record, offering new insights into text typology, scribal language and vowel classification. Much of the data discussed is new and original.
