The new edition of The Developing Person Through the Lifespan combines theory and the most up-to-date research with practical illustration in order to engage readers in the study of development. It addresses the fundamental issues from a chronological point of view, and covers the entirety of the lifespan (not just infancy or adolescence). The book's enhanced pedagogy works alongside the author's lively narrative voice to ensure that this edition remains as

user-friendly, if not more so, than its predecessors. CTET Paper-II Exam : Science & Mathematics | 7 Mock Tests + 3 Previous Year Papers (1500+ Solved Questions) SAGE Gábor Lővei's scientific communication course for students and scientists explores the intricacies involved in publishing primary scientific papers, and has been

taught in more than twenty countries. Writing and Publishing Scientific Papers is the distillation of Lővei's lecture notes and experience gathered over two decades; it is the coursebook many have been waiting for. The book's three main sections correspond with the three main stages of a paper's journey from idea to print: planning, writing, and

publishing. Within the book's chapters, complex questions such as 'How to write the introduction?' or 'How to submit a manuscript?' are broken down into smaller, more manageable problems that are then discussed in a straightforward, conversational manner, providing an easy and enjoyable reading experience. Writing and

Publishing Scientific Papers stands out from its field by targeting scientists whose first language is not English. While also touching on matters of style and grammar, the book 's main goal is to advise on first principles of communication. This book is an excellent resource for any student or scientist wishing to learn more about the scientific

publishing process and scientific communication. It will be especially useful to those coming from outside the English-speaking world and looking for a comprehensive guide for publishing their work in English. National Academies Press
Now in paperback, this helpful volume by pastor and best-selling author John MacArthur guides readers in cultivating a biblical worldview on a wide range of issues. What we think shapes who we are. That's why the Bible tells us, "Do not be conformed to this world, but be transformed by the renewal of your mind" (Romans 12:2a). In a world of differing voices competing for our allegiance, we must learn to "think biblically" so we can distinguish good from evil. God is the Creator of this world; his voice-his Word-must guide our thoughts and our lives. With the Bible in their hands, John MacArthur and other scholars and teachers from the Master's College confront the false worldviews that dominate our postmodern world. The authors provide models for cultivating a biblical mind-set on worship, psychology, gender, science, education, history, government, economics, and literature. This book will help anyone who is striving to think biblically in today's culture.

Responsible Science is a comprehensive review of factors that influence the integrity of the

research process. Volume I examines reports on the incidence of misconduct in science and reviews institutional and governmental efforts to handle cases of misconduct. The result of a two-year study by a panel of experts convened by the National Academy of Sciences, this book critically analyzes the impact of today's research environment on the traditional checks and balances that foster integrity in science. Responsible Science is a provocative examination of the role of educational efforts; research guidelines; and the contributions of individual scientists, mentors, and institutional officials in encouraging

responsible research practices.

How to Write a Good Scientific Paper

Many scientists and engineers

consider themselves poor writers or find

the writing process difficult. The good

news is that you do not have to be a

talented writer to produce a good

scientific paper, but you do have to be a

careful writer. In particular, writing for

a peer-reviewed scientific or

engineering journal requires learning and

executing a specific formula for

presenting scientific work. This book is all

about teaching the style and conventions of writing for a peer-reviewed scientific journal. From

structure to style, titles to tables, abstracts to author

Social Science Research

One of the pathways by which the

scientific community confirms the validity

of a new scientific discovery is by

repeating the research that produced it.

When a scientific effort fails to

independently confirm the computations or

results of a previous study, some fear that

it may be a symptom of a lack of rigor in science, while others argue that such an observed

inconsistency can be an important precursor to new

discovery. Concerns about reproducibility and replicability have

been expressed in both scientific and

popular media. As these concerns came

to light, Congress requested that the

National Academies of Sciences,

Engineering, and Medicine conduct a

study to assess the extent of issues

related to reproducibility and

replicability and to offer

recommendations for improving rigor and

transparency in scientific research.

Reproducibility and Replicability in

Science defines reproducibility and replicability and examines the factors that may lead to non-reproducibility and non-replicability in research. Unlike the typical expectation of reproducibility between two computations, expectations about replicability are more nuanced, and in some cases a lack of replicability can aid the process of scientific discovery. This report provides recommendations to researchers, academic institutions, journals, and funders on steps they can take to improve reproducibility and replicability in science.
