Why do parents who pull off multi-million dollar deals at work struggle to negotiate with their kids at home? This book provides insights and solutions from the scientific literature in organizational behavior, decision-making, psychology, and negotiations. People often don't bring their best professional skills to conversations with their kids. Sometimes they are derailed by their kids' emotional tactics and lack of rationality, and sometimes they are simply overwhelmed and exhausted by their own demanding lives. In *Negotiating at Home*, Terri R. Kurtzberg and Mary C. Kern offer guidance to parents, based on research conducted over decades in related fields on how to negotiate effectively. The authors argue that effective negotiations are not merely the task of creating a single solution to an immediate problem, but instead are about creating a process by which the interests of both sides are routinely considered and solutions are generated together. Kurtzberg and Kern cover individual preferences and strategic approaches to resolving conflicts, the many psychological concepts of fairness, and the common tactics used to attain power in this setting. Combines explanations of effective negotiation strategies with specific tips for implementing them in interactions with your kids Offers reminders for and deeper explanations of commonly held ideas while also presenting new studies and findings from related fields Shares real stories and examples throughout to demonstrate the common "pain points" experienced by parents Includes a guide for kids to learn the basic rules of effective negotiating for use in their own lives

Children are the foundation of the United States, and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development, well-being, and long-term outcomes, despite substantial scientific evidence about how those adversities contribute to poor health. Advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods, and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. *Vibrant and Healthy Kids: Aligning Science, Practice, and Policy to Advance Health Equity* builds upon and updates research from *Communities in Action: Pathways to Health Equity* (2017) and *From Neurons to Neighborhoods: The Science of Early Childhood Development* (2000). This report provides a brief overview of stressors that affect childhood development and health, a framework for applying current brain and development science to the real world, a roadmap for implementing tailored interventions, and recommendations about improving systems to better align with our understanding of the significant impact of health equity.
