Similar Images ... breathing urinary system excretory system lungs alveoli reproductive system cardiovascular system ... The urinary system consists of the kidneys, ureters,

urinary bladder, and urethra. The kidneys filter the blood to remove wastes and produce urine. The ureters, urinary bladder, and urethra together form the urinary tract, which acts as a plumbing system to drain urine from the kidneys, store it, and then release it during urination. Diagrams - The Excretory System Excretory system. However, as excretion involves several functions that are only superficially related, it is not usually used in more formal classifications of anatomy or function. As most healthy functioning organs produce

---

metabolic and other wastes, the entire organism depends on the function of the system.
