Probability Mass Function. $f(x)$ - Probability mass function for a discrete random variable X having possible values x_1, x_2, \dots, x_n

$f(x_i) = \Pr(X = x_i)$ is the probability that X has the value x_i .

Properties. $0 \leq f(x_i) \leq 1$

$\sum_{i=1}^n f(x_i) = f(x_1) + f(x_2) + \dots + f(x_n) = 1$

$f(x_i)$ can be displayed as a table or as a mathematical function.

Answers. A population is the total collection of objects that are of interest in a statistical study. A sample, being a subset, is typically smaller than the population. In a statistical study, all elements of a sample are available for observation, which is not typically the case for a population.

Elementary Statistics: Picturing the World (6th Edition ...

In general, statistics is a study of data: describing properties of the data, which is called descriptive statistics, and drawing conclusions about a population of interest from information extracted from a sample, which is called inferential statistics. Computing the single number \$8,357 to summarize the data was an operation of descriptive statistics; using it to make a statement about the ...
