The circuit is either supplied with a DC or AC source and the output is the voltage across the capacitor. The total impedance of the circuit is the sum of the independent impedances previously stated: $Z_{RLC} = Z_R + Z_L + Z_C = R + j(L\omega - 1/C\omega)$ In the next section, we present the response of this circuit to a voltage step also known as the transient ...

? Experiment 5: RC Circuits Abstract The purpose of this lab is to learn and understand RC Circuits. An RC circuit is composed of at least one resistor and at least one capacitor. A capacitor is composed of two plates with either air or an insulator also known as a dielectric between the plates. We do not want the plates to be touching, because then we would only have a conductor.
