Teaching Humanities and Social Sciences, 7e prepares teachers to develop and implement programs in the humanities and social sciences learning area from F-10. It successfully blends theory with practical approaches to provide a

basis for teaching that is engaging, inquiry-based and relevant to students' lives. Using Version 8.1 of the Australian Curriculum, the text discusses the new structure of the humanities and social sciences learning area. Chapters on history, geography, civics and citizenship, and economics and business discuss the nature of these subjects and how to teach them to achieve the greatest benefit for students, both as sub-strands within the Year F-6/7 HASS subject and as distinct Year 7-10 subjects. Throughout, the book maintains its highly respected philosophical and

practical orientation, including a commitment to deep learning in a context of critical inquiry. With the aid of this valuable text, teachers can assist primary, middle and secondary students to become active and informed citizens who contribute to a just, democratic and sustainable future. "Over the last decade, the practices by which scholarly knowledge is produced – both within and across disciplines – have been substantially influenced by the appearance of digital information resources, communication networks and technology enhanced research tools. Viewed

from a methodological perspective, the rich ICT-based environment in educational settings influences research methods, ethics and the general conduct of research. *Methodological Challenges When Exploring Digital Learning Spaces in Education* represents a collection of work of established academics as well as emerging early career researchers all of whom focus on various methodological challenges. From numerous perspectives, the chapters in this volume deal with three particularly demanding challenges for educational research in digital learning contexts. The first challenge concerns how research manages to explore networked learning within a multi-faceted ICT environment. What kind of research designs and forms of data collection are able to grasp this complexity of multiple learning taking place within these contexts? The second challenge deals with how researchers experience the research context and interact with various actors within these settings. How to capture and understand interaction between contexts and across different dimensions of contexts in time and space? And finally, the third challenge is about exploring how children make meaning across physical places and virtual spaces. All together, these challenges are questioning the traditional research methods that we use and are familiar with. This volume is devoted to stimulating debate about the various methodological challenges facing the researcher in the digital sphere of educational research, and furthermore, exploring what kind of new methodological approaches these challenges

impose. It is aimed at students, researchers and academics within education and those working with learning across disciplines and contexts interested in methodological issues. Greta Björk Gudmundsdottir lives and works in Oslo, where she is a Researcher at the Norwegian Centre for ICT in Education. Kristin Beate Vasbø also works and lives in Oslo, where she is an Associate Professor at the Department of Teacher Education and School Research, University of Oslo. "

Exploring New Hampshire through Project-Based Learning includes 50 well-thought-out projects designed for grades 3-5. In assigning your students projects that dig into New Hampshire's geography, history, government, economy, current events, and famous people, you will deepen their appreciation and understanding of New Hampshire while simultaneously improving their analytical skills and ability to recognize patterns and big-picture themes. Project-based learning today is much different than the craft-heavy classroom activities popular in the past. Inquiry, planning, research, collaboration, and analysis are key components

of project-based learning activities today. However, that doesn't mean creativity, individual expression, and fun are out. They definitely aren't! Each project is designed to help students gain important knowledge and skills that are derived from standards and key concepts at the heart of academic subject areas. Students are asked to analyze and solve problems, to gather and interpret data, to develop and evaluate solutions, to support their answers with evidence, to think critically in a sustained way, and to use their newfound knowledge to formulate new questions worthy of exploring. While some projects are more complex and take longer than others, they all are set up in the same structure. Each begins with the central project-driving questions, proceeds through research and supportive questions, has the student choose a presentation option, and ends with a broader-view inquiry. Rubrics for reflection and assessments are included, too. This consistent framework will make it easier for you assign projects and for your students to follow along and consistently meet expectations. Encourage your students to take charge of their projects as much as possible. As a teacher, you can act as a facilitator and guide. The projects are structured such that students can often work through the process on their own or through cooperation with their classmates.

Learning sciences is an interdisciplinary field that studies teaching and learning. The sciences of learning include cognitive science, educational psychology, computer science, anthropology, sociology, neuroscience, and other fields. The Cambridge Handbook of the Learning Sciences, first published in 2006, shows how educators can use the learning sciences to design more effective learning environments - including school classrooms and also informal settings such as science centers or after-school clubs, on-line distance learning, and computer-based tutoring software. The chapters in this handbook each describe exciting new classroom environments, based on the latest science about how children learn. CHLS is a true handbook in that readers can use it to design the schools of the future - schools that will prepare graduates to participate in a global society that is increasingly based on knowledge and innovation.

We used to live in two worlds: the workplace, a formal and restricted environment, and the social world, which was unrestricted and expressive. These spaces used to be separate, colliding only at moments of misjudged intra-office relationships and the alcohol-fuelled miscommunication of the office Christmas party. But no more. There is no longer a formal and social divide, and instead we

inhabit a grey space where we answer office emails from the bath and use Facebook in meetings. That photograph of the holiday in Ibiza will haunt you in your next job interview and the post about how much you hate your boss has just gone global thanks to a misjudged retweet. But what does social mean for learning? It's an incredible opportunity to engage, and this book will explore ways in which we can do so, by showing how to create more dynamic and challenging social learning spaces. Through nearly fifty collected articles from my daily blog, together with new commentaries and practical tips for each, I look at what drives engagement in these spaces and how the thinking around them has evolved. Social layers are being built up around all types of learning. It's no longer a question of whether the conversations take place; it's a question of whether we want to be involved in them.
