Teaching and Learning Mathematical
Problem Solving

One of the central features in current
educational reforms is a focus on
learning outcomes. Many countries

have established or revised standards to
describe what teachers are supposed to
teach and students are expected to
learn. More recently, the emphasis has
shifted to considerations of how
standards can be operationalized in
order to make the outcomes of
educational efforts more tangible. This
book is the result of a symposium held
in Kiel, that was arranged by two
science education groups, one at the
IPN (Leibniz-Institute for Science and
Mathematics Education at the University
of Kiel) in Germany and the other at the
University of York, UK. The seminar
brought together renowned experts from
12 countries with different notions of the
nature and quality of learning outcomes.
The aim was to clarify central
conceptions and approaches for a better
understanding among the international
science education community. The book
is divided into five parts. In Part A, the
organizers set the scene, describing the
rationale for arranging the symposium.
Part B provides a broad overview about
different approaches, challenges, and
pitfalls on the road to the clarification of
meaningful and fruitful learning
outcomes. The set of papers in Part C
provides deep insights into different,
although comparable approaches which
aim to frame, to assess, and to promote
learning and learning outcomes in
science education. Smaller projects are
presented as well as broad, coordinated
national programs. The papers in Part D
outline the individual historical
development from different national
perspectives, reflecting the deficits and
problems that led to current reforms.
Finally, a summary of the organizers

analyses the conclusions from different vantage points.
