Anatomy and

Mifflin Harcourt

This edited volume builds on existing alternative food initiatives and food movements research to explore how a systems approach can bring about health and well-being through enhanced collaboration. Chapters describe the myriad ways community-driven actors work to foster food systems that are socially just, embed food in local economies, regenerate the environment and

actively engage citizens. Drawing on case studies, interviews and Participatory Action Research projects, the editors share the stories behind community-driven efforts to develop sustainable food systems, and present a critical assessment of both the tensions and the achievements of these initiatives. The volume is unique in its focus on approaches and methodologies that

both support and recognize the value of community-based practices. Throughout the book the editors identify success stories, challenges and opportunities that link practitioner experience to critical debates in food studies, practice and policy. By making current practices visible to scholars, the volume speaks to people engaged in the co-creation of knowledge, and documents a crucial point in the evolution of a rapidly expanding and dynamic sustainable food systems movement. Entrenched food insecurity, climate change induced crop failures, rural-urban migration, escalating rates of malnutrition related diseases, and aging farm populations are increasingly common obstacles for communities around the world. Merging private, public and civil society spheres, the book gives voice to actors from across the sustainable food system movement including small businesses, not-for-profits, eaters, farmers and government. Insights into the potential for market restructuring, knowledge sharing, planning and bridging civic-political divides come from across Canada, the United States and Mexico, making this a key resource for policy-

makers, students, citizens, and practitioners.

Resources in Education

NSTA Press

This book addresses one of the most persistent issues confronting governments, educations systems and schools today: the attraction, preparation, and retention of early career teachers. It draws on the stories of sixty graduate teachers from Australia to identify the key barriers, interferences and obstacles to teacher resilience and

what might be done about it. Based on these stories, five interrelated themes - policies and practices, school culture, teacher identity, teachers ' work, and relationships – provide a framework for dialogue around what kinds of conditions need to be created and sustained in order to promote early career teacher resilience. The book provides a set of resources – stories, discussion, comments,

reflective questions and insights from the literature – to promote conversations among stakeholders rather than providing yet another ‘ how to do ’ list for improving the daily lives of early career teachers. Teaching is a complex, fragile and uncertain profession. It operates in an environment of unprecedented educational reforms designed to control, manage and manipulate pedagogical judgements. pedagogical and Teacher resilience must take account of both the context and circumstances of individual schools (especially those in economically disadvantaged communities) and the diversity of backgrounds and talents of early career teachers themselves. The book acknowledges that the substantial level of change required – cultural, structural, pedagogical and relational – to improve early career teacher resilience demands a great deal of cooperation and support from governments, education systems, schools, universities and communities: teachers cannot do it alone. This book is written to generate conversations amongst early career teachers, teacher colleagues, school leaders, education

administrators, academics and community leaders about the kinds of pedagogical and relational conditions required to promote early career teacher resilience and wellbeing.
