Exploring Psychology in Modules McGraw-Hill Humanities/Social Sciences/Languages

There is no such thing as a light, perfunctory revision of David Myers' Psychology. Each new edition is a fresh opportunity to communicate psychology's enduring principles and pivotal research in terms that captivate students and connect with their lives. But even by Myers' standards, Psychology, Ninth Edition, is truly exceptional. This exhaustive update of the bestselling textbook for introductory

psychology incorporates the largest number of new research citations of any revision to date, as well as new inquiry-based pedagogy, a reconceptualized art program, and the next generation of media and supplements. Yet, edition after edition, David Myers demonstrates an uncanny ability to communicate the science of psychology in a uniquely engaging, accessible way. Watch our new videos from David Myers here, including our animation on THE TESTING EFFECT narrated by David Myers.

This text is about doing science and the active process of reading, learning, thinking, generating ideas, designing experiments, and the logistics surrounding each step of the research process. In easy-to-read, conversational language, Kim MacLin teaches students experimental design principles and techniques using a tutorial approach in which students read, critique, and analyze over 75 actual experiments from every major area of psychology. She provides them with real-world information about how science in psychology is conducted and how they can participate.

Recognizing that students come to an experimental design course with their own interests and perspectives, MacLin covers many subdisciplines of psychology throughout the text, including IO psychology, child psychology, social psychology, behavioral psychology, cognitive psychology, clinical psychology, health psychology, educational/school psychology, legal psychology, and personality psychology, among others. Part I of the text is content oriented and provides an overview of the principles of experimental design. Part II contains

annotated research articles for students to read and analyze. Classic articles have been retained and 11 new ones have been added, featuring contemporary case studies, information on the Open Science movement, expanded coverage on ethics in research, and a greater focus on becoming a better writer, clarity and precision in writing, and reducing bias in language. This edition is up to date with the latest APA Publication Manual (7th edition) and includes an overview of the updated bias-free language guidelines, the use of singular "they," the new ethical compliance checklist, and other key changes in APA style. This text is essential reading for students and researchers interested in and studying experimental design in psychology.

Psychology Through the Eyes of Faith

This modules-based version of Myers' Exploring Psychology breaks down the book's 15 chapters into 43 short modules. Myers was inspired to create this text by the memory research in "chunking" (showing that shorter reading assignments are more effectively absorbed than longer ones), as well as by numerous students and instructors who

expressed a strong preference for textbooks with more, shorter chapters. Each self-standing module can be read in a single sitting, and instructors can assign any combination of modules, in any order they want. DSM 5 Updates Available for Fall 2014 classes, this update version features new content from David Myers in response to the release of the DSM-5. This new content is integrated into the text without changing pagination or the structure of the chapters. A special DSM 5 Supplement by the David Myers is available for Fall 2013 and Spring and Summer 2014 courses. View the Page-Referenced Guide to the DSM-5 updates for Exploring Psychology in Modules.

From his experience as an author and teacher, David Myers has concluded that students digest material more easily when it is presented in smaller chunks. Ask students whether they would prefer a 600-page book to be organized as fifteen 40-page chapters or as forty 15-page chapters and their answers will approach a consensus: students prefer shorter chapters. And research on learning strategies supports this preference: chunked material

is more easily digested. Responding to student preference and learning research, Myers has created a modular version of his best-selling brief introductory text, Exploring Psychology. Exploring Psychology, Fifth Edition, in Modules reorganizes the 15 chapters of Exploring Psychology, Fifth Edition into 40 short chapters, or modules. The modular organization offers instructors more freedom to pick and choose from a smorgasbord of topics. Instead of deciding whether to assign the whole chapter on consciousness, instructors can simply assign the module on sleep and dreams, the module on hypnosis, and/or the module on drugs and behavior. Given that each module stands alone and is not dependent upon the content found in other modules, instructors can also choose to cover the modules in any order they please. Featuring the latest research and teaching innovations, Myers' new text reflects the author's continuing drive to discover the most effective way to communicate psychology's major ideas to an uninitiated audience. Note: Exploring Psychology, Fifth Edition, in Modules is now available (saleable) in two different

saleable versions: a. A hardcover, spiralbound text [similar in structure to the spiralbound Myers in Modules] b. A perfectbound paperback text The features that have made David Myers' introductory psychology textbooks such phenomenal successes (compelling narrative, critical thinking theme, superior design) are all present in Exploring Psychology, Fifth Edition, in Modules. The way those hallmark features are presented is different. This is NOT a brief version of Psychology: Myers in Modules, Sixth Edition. Rather, this new text is a Modularized version of Exploring Psychology, Fifth Edition. Therefore, it enjoys all of the hallmark features of Exploring Psychology, Fifth Edition: SQ3R pedagogical system, terrific writing, and briefer coverage of key topics. It is, in fact, the same writing/content as can be found in Exploring Psychology, Fifth Edition, just with a different organization.

Exploring the Self CRC Press

Some 28 million people in America and 350 million people worldwide live with hearing loss. How do these people and their families cope? What are their experiences of pain, humor, and hope? What support do medicine and technology now offer them, and what is on the horizon? In this

engaging and practical book, David Myers, who has himself suffered gradual hearing loss, explores the problems faced by the hard of hearing at home and at work and provides information on the new technology and groundbreaking surgical procedures that are available. Drawing on both his own experiences and his expertise as a social psychologist, Myers recounts how he has coped with hearing loss and how he has incorporated technological aids into his life. The family and friends of the hard of hearing also face adjustments. Myers addresses their situation and provides advice for them on how best to alert loved ones to a hearing problem, persuade them to seek assistance, and encourage them to adjust to and use hearing aids.

The aim of this volume is to discuss recent research into self-experience and its disorders, and to contribute to a better integration of the different empirical and conceptual perspectives. Among the topics discussed are questions like 'What is a self?', 'What is the relation between the self-givenness of consciousness and the givenness of the conscious self?', 'How should we understand the self-disorders encountered in schizophrenia?' and 'What general insights into the nature of the self can pathological phenomena provide us with?' Most of the

contributions are characterized by a distinct phenomenological approach. The chapters by Butterworth, Strawson, Zahavi, and Marbach are general in nature and address different psychological and philosophical aspects of what it means to be a self. Next Eilan, Parnas, and Sass turn to schizophrenia and ask both how we should approach and understand this disorder, and, more specifically, what we can learn about the nature of selfhood and existence from psychopathology. The chapters by Blakemore and Gallagher present a defense and a criticism of the so-called model of self-monitoring, respectively. The final three chapters by Cutting, Stanghellini, Schwartz and Wiggins represent anthropologically oriented attempts to situate pathologies of self-experience. (Series B)

Psychology In Modules (Spiral) Routledge
Generally regarded as the most important of the Civil War campaigns conducted in the Shenandoah Valley of Virginia, that of 1864 lasted more than four months and claimed more than 25,000 casualties. The armies of Philip H. Sheridan and Jubal A. Early contended for immense stakes. Beyond the agricultural bounty and the boost in morale a victory would bring, events in the Valley also would affect Abraham Lincoln's chances for reelection in the November 1864 presidential

canvass. The eleven original essays in this volume reexamine common assumptions about the campaign, its major figures, and its significance. Taking advantage of the most recent scholarship and a wide range of primary sources, contributors examine strategy and tactics, the performances of key commanders on each side, the campaign's political repercussions, and the experiences of civilians caught in the path of the armies. The authors do not always agree with one another, yet, taken together, their essays highlight important connections between the home front and the battlefield, as well as ways in which military affairs, civilian experiences, and politics played off one another during the campaign.
