"We cast social psychology in the intellectual tradition of the liberal arts. By the teaching of great literature, philosophy, and science, liberal arts education seeks to expand our awareness and to liberate us from the confines of the present. By focusing on humanly significant issues, we aim to offer social psychology's big ideas and findings to pre-professional psychology students, and to do so in ways that stimulate all students.

And with close-up looks at how the game is played-at the varied research tools that reveal the workings of our social nature-we hope to enable students to think smarter"--

The Psychology of Women and Gender Macmillan

This revised first edition is a comprehensive, easy-to-read introduction to personal counseling written for professional and volunteer counselors and those who train them. A major new addition to the book, making it particularly attractive to those who train counselors, is the inclusion of training group exercises for all skills chapters. After reading a particular chapter, the exercises relating to that chapter, in part VI of the book, can be used by trainers to greatly enhance the learning process. These exercises have

been found to be popular with both students and those teaching them. The chapters describing basic and more advanced counseling skills are arranged in a sequence that is particularly suitable when teaching student counselors to learn and practice using these skills for the first time. The authors adopt an integrative approach that allows the reader to learn, understand, and use skills taken from major counseling approaches, and to integrate these into a sequential process that maximizes the possibility of facilitating change in clients. Of considerable value for new counselors are those sections of the book that describe the fundamental principles of the counseling relationship, and explain the theories of change applicable to the various approaches to counseling. Unique features include: a highly practical integrative approach; discussion of the specific skills required for success; practical suggestions on ways to learn and develop new skills; an understanding of the role of a counselor's supervisor; information on practical issues such as keeping records, arrangement of the counseling room, and ways to look after yourself as a counselor; plus practical information on issues of confidentiality and professional ethics. The text will serve as a valuable resource for workers in a wide variety of helping professions where counseling skills are useful, such as psychology, social work, welfare work, medicine, nursing, human services, and education.

How reliable is our intuition? How much should we depend on gut-level instinct rather than rational analysis when we play the stock market, choose a mate, hire an employee, or assess our own abilities? In this engaging and accessible book, David G. Myers shows us that while intuition can provide us with useful—and often amazing—insights, it can also dangerously mislead us. Drawing on recent psychological research, Myers discusses the powers and perils of intuition when:

- judges and jurors determine who is telling the truth;
- mental health workers predict whether someone is at risk for suicide or crime;
- coaches, players, and fans decide who has the hot hand or the hot bat;
- personnel directors hire new employees;
- psychics claim to be clairvoyant or to have premonitions;
- and much more.

The aim of this volume is to discuss recent research into self-experience and its disorders, and to contribute to a better integration of the different empirical and conceptual perspectives. Among the topics discussed are questions like 'What is a self?', 'What is the relation between the self-givenness of consciousness and the givenness of the conscious self?', 'How should we understand the self-disorders encountered in schizophrenia?' and 'What general insights into the nature of the self can pathological phenomena provide us with?' Most of the contributions are characterized by a distinct phenomenological approach. The chapters by Butterworth, Strawson, Zahavi, and Marbach are general in nature and address different psychological and philosophical aspects of what it means to be a self. Next Eilan, Parnas, and Sass turn to schizophrenia and ask both how we should approach and understand this disorder, and, more specifically, what we can learn about the nature of selfhood and existence from psychopathology. The chapters by Blakemore and Gallagher present a defense and a criticism of the so-called model of self-monitoring, respectively. The final three chapters by Cutting, Stanghellini, Schwartz and Wiggins represent anthropologically oriented attempts to situate pathologies of self-experience. (Series B)

Some 28 million people in America and 350 million people worldwide live with hearing loss. How do these people and their families cope? What are their experiences of pain, humor, and hope? What support do medicine and technology now offer them, and what is on the horizon? In this engaging and practical book, David Myers, who has himself suffered gradual hearing loss, explores the problems faced by the hard of hearing at home and at work and provides information on the new technology and groundbreaking surgical procedures that are

available. Drawing on both his own experiences and his expertise as a social psychologist, Myers recounts how he has coped with hearing loss and how he has incorporated technological aids into his life. The family and friends of the hard of hearing also face adjustments. Myers addresses their situation and provides advice for them on how best to alert loved ones to a hearing problem, persuade them to seek assistance, and encourage them to adjust to and use hearing aids.
