This book brings together the latest research in education in relation to science and religion. Leading international scholars and practitioners provide vital insights into the underlying debates and present a range of practical approaches for teaching. Key themes include the origin of the universe, the theory of evolution, the nature of the human person, the nature of science and Artificial Intelligence. These are explored in a range of international contexts. The book provides a valuable resource for teachers, students and researchers in the fields of education, science, religious education and the growing specialist field of science and religion. Science and Religion in Education is a compelling read for current and future generations of academic researchers and teachers who wish to explore the fascinating intersect between science education and religious studies. The research findings and insights

presented by these international scholars offer new dimensions on contemporary practice. - Vaile Dawson, Professor of Science Education, University of Western Australia Science and Religion in Education offers a fascinating and diverse collection of chapters surveying the current state of thinking about how science and religion can be understood in education. The book offers a wealth of thought-provoking material for anyone interested in the natures of science and religion, their relationship(s), or their representation within the curriculum. - Professor Keith Taber, University of Cambridge Science education and religious education are uncomfortable bedfellows. This book, written in part as a response to the – perhaps too clear – accounts of Ian Barbour, provides suitably nuanced pictures of how science and religion are dealt with in schools. Whatever the views of specialists, young people ‘ receive ’ education in both science and religion: hearing their voices is refreshing in such a serious academic account. - Julian Stern, Professor of Education and Religion, York St John University Humans have long endeavored to make sense of the world often using science and religion. Yet, these two great traditions are frequently seen as incompatible. This useful volume features thoughtful contributions from experts whose work straddles the divide and provides educators with arguments, engaging strategies and historical perspectives to help build a bridge and allow a fruitful discussion in schools. - William F. McComas, Distinguished Professor of Science Education, University of Arkansas Equal parts critical examination of existing models for the relationship between science and religion, scholarly exposition of newer models, and insights toward practical

application in classrooms, this book is an invaluable resource for science and religion educators. If you have been thinking it is time we looked beyond Barbour ’ s taxonomy, you will want to read this book. If you have not, I implore you to read this book. - Jason Wiles, Associate Professor of Biology and Science Education, Syracuse University

The Association for Science Education Book Award 2016, Finalist. Science in the early years is about more than developing understanding of key scientific concepts, it is about encouraging imagination, creativity and curiosity and nurturing key scientific skills to form a firm base for learning. Understanding how best to do this for young children aged 3-7 is the focus of the book. By concentrating on practical and naturally occurring experiences the authors look at meeting the needs of the curriculum with children at the centre of their own learning. Chapters look at how to work with children to: Find out and develop their own ideas Get them inquiring scientifically Use evidence to support their views This book will really help develop the whole child across the curriculum and make sure they have the skills they need for later learning.

Some scientists have religious beliefs we must ourselves be prepared and willing to make a reasoned presentation of our faith, especially to young scientists, who have all too often concluded that a serious faith in a personal God and objective pursuit of scientific truth are incompatible. "Professor Francis Collins, Director, National Human Genome Research Institute " some do not the beliefs of most popular religions by scientific standards are based on evidence so flimsy that only an act of blind faith can make them acceptable. "Dr Francis Crick (co-discoverer of DNA s structure) " However, science and belief are both very important for us. Do we have to choose between them? The view that science and belief are in conflict is a major stumbling block for many people today. Michael Poole addresses this issue in "Exploring Science and Belief. " Is science the ultimate test of what to believe? Do its laws make belief in miracles impossible? Has Darwin s work ruled out the idea of a creating God? How did the universe develop? Was it accidental or planned? What will happen to it eventually? Do we have any significance in it? These are some of the questions addressed in "Exploring Science and Belief." Although he start(s) from what is for the theist the conviction, for the agnostic the hypothesis, and for the atheist the delusion that God exists, Michael Poole also dicusses evidence for God s existence. Table of Contents Introduction 1 God s Two Books 2 Watch Your Language 3 Explaining Explanations 4 Belief, Faith and Evidence 5 Miracles 6 First and Last Things 7. The Galileo Affair 8. Enemies or Allies? 9. Creation and Evolution 10. Accident or Design? Endnotes Glossary"
