The exponential functions are very important in mathematics, which is why it is crucial for students to have a complete understanding of this concept. An example of a simple exponential function is  $f(9 \times 0) = 2 \times$ . These functions are solutions of a dynamic system and can represent growth or decay. The exponential functions are distinguished from a fact that the growth rate of such a function is directly proportional to the value of the function.

exponential function. Below is some advice that will help you decide. Linear Function Exponential Function  $f(x) = mx + b$  or  $f(x) = m(x - x_1) + y_1$   $f(x) = a \cdot b^x$   $b$  is the starting value,  $m$  is the rate or the slope.  $m$  is positive for growth, negative for decay.  $a$  is the starting value,  $b$  is the base or the multiplier.
