Chinese students are the largest international student group in UK universities today, yet little is known about their undergraduate writing and the challenges they face. Drawing on the British Academic Written English corpus - a large corpus of proficient undergraduate student writing

collected in the UK in the early 2000s - this study explores Chinese students' written assignments in English in a range of university disciplines, contrasting these with assignments from British students. The study is supplemented by questionnaire and interview datasets with discipline lecturers, writing tutors and students, and provides a comprehensive picture of the Chinese student writer today. Theoretically framed through work within academic literacies and lexical priming, the author seeks to explore what we know about Chinese students' writing and to extend these findings to undergraduate writing more generally. In a globalized educational environment, it is important for educators to understand differences in writing styles across the student body, and to move from the widespread deficit model of student writing towards a descriptive model which embraces different ways of achieving success. Chinese Students' Writing in English will be of value to researchers, EAP tutors, and university lecturers teaching Chinese students in the UK, China, and other English or Chinese-speaking countries.

This is the first of a two-volume set (CCIS 434 and CCIS 435) that constitutes the extended abstracts of the posters presented during the 16th International Conference on Human-Computer Interaction, HCII 2014, held in Heraklion, Crete, Greece in June 2014, and consisting of 14 thematic conferences. The total of 1476 papers and 220 posters

presented at the HCII 2014 conferences were carefully reviewed and selected from 4766 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of Human-Computer Interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. The extended abstracts were carefully reviewed and selected for inclusion in this two-volume set. This volume contains posters' extended abstracts addressing the following major topics: design methods, techniques and knowledge; the design of everyday things; interacting with information and knowledge; cognitive, perceptual and emotional issues in HCI; multimodal and natural interaction; algorithms and machine learning methods in HCI; virtual and augmented environments.

Learn how to read and translate technical manuals, research publications, and reference works. This two-volume set is designed to help the intermediate-level learner of Japanese build a technical vocabulary, reinforce understanding of frequently used grammatical patterns, improve reading comprehension, and practice translating technical passages. The

glossary in volume 2 clarifies words and phrases that often puzzle beginning readers. The sample readings on technical topics are drawn from a broad range of specialties, from mathematics and computer science to electronics and polymer science. The initial grammar lesson and the first nine field-specific lessons constitute the common core to be used by all instructors or students. Topics of interest from the remaining thirty-one field-specific lessons may be selected to produce a customized course of study. Intermediate Technical Japanese is designed to fulfill a typical two-semester sequence. Volume 1 contains: o information about 600 key kanji o explanations of 100 important grammatical patterns o more than 700 scientific or technical essays o an index of the grammatical patterns. Volume 2 contains: o a complete glossary Livy Professional Publications Incorporated This open access book examines how the social sciences can be integrated into the praxis of engineering and science, presenting unique perspectives on the interplay between engineering and social science. Motivated by the report by the Commission on Humanities and Social Sciences of the American Association of Arts and Sciences, which emphasizes the importance of social sciences and Humanities in technical fields, the essays and papers collected in this book were presented at the NSF-funded workshop ' Engineering a Better

Future: Interplay between Engineering, Social Sciences and Innovation', which brought together a singular collection of people, topics and disciplines. The book is split into three parts: A. Meeting at the Middle: Challenges to educating at the boundaries covers experiments in combining engineering education and the social sciences; B. Engineers Shaping Human Affairs: Investigating the interaction between social sciences and engineering, including the cult of innovation, politics of engineering, engineering design and future of societies; and C. Engineering the Engineers: Investigates thinking about design with papers on the art and science of science and engineering practice.

Higher education institutions in Anglophone countries often rely on standardized English language proficiency exams to assess the linguistic capabilities of their multilingual international students. However, there is often a mismatch between these scores and the initial experiences of international students in both academic and social contexts. Drawing on a digital ethnography of Chinese international students' first semester languaging practices, this book examines their challenges, needs and successes on their initial languaging journeys in higher education. It analyzes how they use their rich multilingual and multi-modal communicative repertoires to facilitate languaging across contexts, in order to suggest how university support systems might better serve the needs of multilingual international students.

Provides educators with practical strategies, tools, and techniques for teaching critical reading

skills to students in the social and natural sciences. Strong critical reading skills are an essential part of any student's academic success. Teaching these vital skills requires educators to develop and implement effective teaching strategies, often based on their own critical reading practices. Critical Reading Across the Curriculum, Volume 2: Social and Natural Sciences provides educators with expert insights, real-world methods, and proven strategies to build critical reading skills in students across disciplines. Drawing from the experience of seasoned classroom practitioners, this book presents a dozen essays that offer various applications of critical reading best practices in fields such as anthropology, biology, economics, engineering, political science, and sociology. Clear, jargon-free chapters identify, explain, and illustrate best teaching practices for critical reading. Containing numerous practical examples and demonstrations, essays written by experts in their respective fields explain what critical reading requires for their discipline, as well as how to teach those skills in the classroom. Every essay includes a host of pedagogical activities, assignments, and projects that can be used directly or adapted for diverse teaching applications. This valuable book helps educators: Develop the skills students need to ask the right questions, consider sources, assess evidence, evaluate arguments, and reason critically

Encourage students to practice critical reading skills with engaging exercises and activities Teach students to establish context and identify contextual connections Explain how to read for arguments, including content-based and conceptual arguments Adapt and apply teaching strategies to various curricula and disciplines

Critical Reading Across the Curriculum, Volume 2: Social and Natural Sciences is an ideal resource for educators in a wide range of areas, such as college and high school instructors in science and social science disciplines and instructors of graduate education courses.

Railway Mechanical and Electrical Engineer Corpora and Rhetorically Informed Text Analysis explores applications of rhetorically informed approaches to corpus research. Bringing together contributions from scholars in a variety of fields, it takes up questions of how theories and traditions in rhetorical analysis can be integrated with corpus techniques in order to enrich our understanding of language use, variation, and history. The studies included in this volume shed light on areas as diverse as student academic writing, political discourse, and the digital humanities. These studies all make use of a dictionary-based tagger called DocuScope, which recognizes tens-of-millions of words and phrases and slots them into categories based on their rhetorical functions. While DocuScope provides a through-line that both links the studies ' various analytical procedures and primes their rhetorical insights, the volume is about more than the explanatory power of a single tool. It demonstrates how rhetorically informed approaches can

complement more established corpus methodologies, underscoring their combined potential.
