The 77th Annual International Meeting of the Psychometric Society (IMPS) brought together quantitative researchers who focus on methods relevant to psychology. The conference included workshops, invited talks by well-known scholars, and presentations of submitted papers and posters. It was hosted by the University of Nebraska-Lincoln and took place between the 9th and 12th of July, 2012. The chapters of this volume are based on presentations from the meeting and reflect the latest work in the field. Topics with a primarily measurement focus include studies of item response theory, computerized adaptive testing, cognitive diagnostic modeling, and psychological scaling. Additional psychometric topics relate to structural equation modeling, factor analysis, causal modeling, mediation, missing data methods, and longitudinal data analysis, among others. The papers in this volume will be especially useful for researchers (graduate students and other quantitative researchers) in the social sciences who use quantitative methods, particularly psychologists. Most readers will benefit from some prior knowledge of statistical methods in reading the chapters.

A Tale of the Conquest of Mexico U of Minnesota Press

An examination of how concepts of “the savage” facilitated technological approaches to modernist design Attempting to derive aesthetic systems from natural structures of human cognition, designers looked toward the “savage mind”—a way of thinking they associated with a racialized subaltern. In *Savage Mind to Savage Machine*, Ginger Nolan uncovers an enduring relationship between “the savage” and the development of technology and its wide-ranging impact on society, including in the fields of architecture and urbanism, the industrial arts, and digital

design. Nolan focuses on the relationship between the applied arts and the structuralist social sciences, proposing that the late-nineteenth-century rise of Freudian psychology, ethnology, and structuralist linguistics offered innovations and new opportunities in studying human cognition. She looks at institutions ranging from the Public Industrial Arts School of Philadelphia and the Weimar Bauhaus to the MIT Media Lab and the Centre Mondial Informatique, revealing a persistent theme of twentieth-century design: to supplant language with more subliminal, aesthetic modes of communication, thereby inculcating a deep intimacy between human habit and new technologies of production, communication, and consumption. This book’s ultimate critique is of the development of the ergonomics of the spirit—the design of the human cognitive apparatus in relation to new aesthetic technologies. Nolan sees these ergonomics as a means of depoliticizing societies through aesthetic technologies intended to seamlessly integrate humans into the programs of capitalist modernity. Revising key modernist design narratives, *Savage Mind to Savage Machine* provides a deep historical foundation for understanding our contemporary world.

Written by civil engineers, dam safety officials, dam owners, geologists, hydraulic engineers, and risk analysts, this handbook is the first cooperative attempt to provide practical solutions to dam problems within the financial constraints faced by dam owners. It provides hands-on information for identifying and remedying common defects in concrete and masonry dams, embankment dams, reservoirs, and related structures. It also includes procedures for monitoring dams and collecting and analyzing data. Case histories demonstrate economical solutions to specific problems. **Perspectives and Trends in Education and Technology** Pearson Prentice Hall
"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my

life and fortunes would not be uninteresting to the public." -an excerpt

Evaluation and Improvement Routledge An exploration of how we see, use, and make sense of modern video game worlds. The move to 3D graphics represents a dramatic artistic and technical development in the history of video games that suggests an overall transformation of games as media. The experience of space has become a key element of how we understand games and how we play them. In Video Game Spaces, Michael Nitsche investigates what this shift means for video game design and analysis. Navigable 3D spaces allow us to crawl, jump, fly, or even teleport through fictional worlds that come to life in our imagination. We encounter these spaces through a combination of perception and interaction. Drawing on concepts from literary studies, architecture, and cinema, Nitsche argues that game spaces can evoke narratives because the player is interpreting them in

order to engage with them. Consequently, Nitsche approaches game spaces not as pure visual spectacles but as meaningful virtual locations. His argument investigates what structures are at work in these locations, proceeds to an in-depth analysis of the audiovisual presentation of gameworlds, and ultimately explores how we use and comprehend their functionality. Nitsche introduces five analytical layers—rule-based space, mediated space, fictional space, play space, and social space—and uses them in the analyses of games that range from early classics to recent titles. He revisits current topics in game research, including narrative, rules, and play, from this new perspective. Video Game Spaces provides a range of necessary arguments and tools for media scholars, designers, and game researchers with an interest in 3D game worlds and the new challenges they pose.
