An examination of how concepts of “the savage” facilitated technological approaches to modernist design. Attempting to derive aesthetic systems from natural structures of human cognition, designers looked toward the “savage mind”—a way of thinking they associated with a racialized subaltern. In *Savage Mind to Savage Machine*, Ginger Nolan uncovers an enduring relationship between “the savage” and the development of technology and its wide-ranging impact on society, including in the fields of architecture and urbanism, the industrial arts, and digital design. Nolan focuses on the relationship between the applied arts and the structuralist social sciences, proposing that the late-nineteenth-century rise of Freudian psychology, ethnology, and structuralist linguistics offered innovations and new opportunities in studying human cognition. She looks at institutions ranging from the Public Industrial Arts School of Philadelphia and the Weimar Bauhaus to the MIT Media Lab and the Centre Mondial Informatique, revealing a persistent theme of twentieth-century design: to supplant language with more subliminal, aesthetic modes of communication, thereby inculcating a deep intimacy between human habit and new technologies of production, communication, and consumption. This book’s ultimate critique is of the development of the ergonomics of the spirit—the design of the human cognitive apparatus in relation to new aesthetic technologies. Nolan sees these ergonomics as a means of depoliticizing societies through aesthetic technologies intended to seamlessly integrate humans

into the programs of capitalist modernity. Revising key modernist design narratives, *Savage Mind to Savage Machine* provides a deep historical foundation for understanding our contemporary world.

Good Faith and Insurance Contracts
Savvas Learning Company

Good Faith and Insurance Contracts sets out an exhaustive analysis of the law concerning the duty

of utmost good faith, as applied to insurance contracts. Now in its fourth edition, it has been updated to address the arrival of the Insurance Act 2015, as well as any references to new case law. In addition, it synthesises all known judicial decisions by the English Courts concerning good

faith in this area. This book is still the only text devoted to a discussion of the duty of utmost good faith applicable to insurance contracts. As good faith is an issue which arises in respect of all insurance contracts, it is a book which will be extremely useful to lawyers involved in insurance as well

as insurance practitioners.

Optimality Theory BoD –

Books on Demand

Written by civil engineers, dam safety officials, dam owners, geologists, hydraulic engineers, and risk analysts, this handbook is the first cooperative attempt to provide practical solutions to dam problems within the financial constraints faced by dam owners. It provides hands-on information for identifying and remedying common defects in concrete and masonry dams, embankment dams, reservoirs, and related structures. It also includes procedures for monitoring

dams and collecting and analyzing data. Case histories demonstrate economical solutions to specific problems. T'es Branch é ? Level 2 Pearson Prentice Hall

This book is the final version of the widely-circulated 1993 Technical Report that introduces a conception of grammar in which well-formedness is defined as optimality with respect to a ranked set of universal constraints. Final version of the widely circulated 1993 Technical Report that was the seminal work in Optimality Theory, never before available in book format. Serves as an excellent

introduction to the principles and practice of Optimality Theory. Offers proposals and analytic commentary that suggest many directions for further development for the professional.

A Theory of Adaptation explores the continuous development of creative adaptation, and argues that the practice of adapting is central to the story-telling imagination. Linda Hutcheon develops a theory of adaptation through a range of media, from film and opera, to video games, pop music and theme parks, analysing the breadth, scope and creative possibilities within each. This new edition is supplemented by a new preface from the author, discussing both new adaptive forms/platforms

and recent critical developments in the study of adaptation. It also features an illuminating new epilogue from Siobhan O'Flynn, focusing on adaptation in the context of digital media. She considers the impact of transmedia practices and properties on the form and practice of adaptation, as well as studying the extension of game narrative across media platforms, fan-based adaptation (from Twitter and Facebook to home movies), and the adaptation of books to digital formats. A Theory of Adaptation is the ideal guide to this ever

evolving field of study and is essential reading for anyone interested in adaptation in the context of literary and media studies.

Exploring Creation With Chemistry Carson-

An exploration of how we see, use, and make sense of modern video game worlds. The move to 3D graphics represents a dramatic artistic and technical development in the history of video games that suggests an overall transformation of

games as media. The experience of space has become a key element of how we understand games and how we play them. In *Video Game Spaces*, Michael Nitsche investigates what this shift means for video game design and analysis. Navigable 3D spaces allow us to crawl, jump, fly, or even teleport through fictional worlds that come to life in our imagination. We encounter these spaces

through a combination of perception and interaction. Drawing on concepts from literary studies, architecture, and cinema, Nitsche argues that game spaces can evoke narratives because the player is interpreting them in order to engage with them.

Consequently, Nitsche approaches game spaces not as pure visual spectacles but as meaningful virtual locations. His argument

investigates what structures are at work in these locations, proceeds to an in-depth analysis of the audiovisual presentation of gameworlds, and ultimately explores how we use and comprehend their functionality. Nitsche introduces five analytical layers—rule-based space, mediated space, fictional space, play space, and social space—and uses them in the analyses of games that range from early	classics to recent titles. He revisits current topics in game research, including narrative, rules, and play, from this new perspective. Video Game Spaces provides a range of necessary arguments and tools for media scholars, designers, and game researchers with an interest in 3D game worlds and the new challenges they pose. Periodontal Diseases CABI This book presents high-quality, peer-reviewed papers from the International Conference in Information Technology & Education (ICITED 2021), to be held at the ESPM – Higher School of Advertising and Marketing, Sao Paulo, Brazil, between

the 15th and the 17th of July 2021. The book covers a specific field of knowledge. This intends to cover not only two fields of knowledge – Education and Technology – but also the interaction among them and the impact/result in the job market and organizations. It covers the research and pedagogic component of Education and Information Technologies but also the connection with society, addressing the three pillars of higher education. The book addresses impact of pandemic on education and use of technology in education. Finally, it also

encourages companies to present their professional cases which is discussed. These can constitute real examples of how companies are overcoming their challenges with the uncertainty of the market. The 77th Annual International Meeting of the Psychometric Society (IMPS) brought together quantitative researchers who focus on methods relevant to psychology. The conference included workshops, invited talks by well-known scholars, and

presentations of submitted papers and posters. It was hosted by the University of Nebraska-Lincoln and took place between the 9th and 12th of July, 2012. The chapters of this volume are based on presentations from the meeting and reflect the latest work in the field. Topics with a primarily measurement focus include studies of item response theory, computerized adaptive testing, cognitive diagnostic modeling, and psychological scaling. Additional psychometric topics relate to structural equation modeling, factor analysis, causal modeling,

mediation, missing data methods, and longitudinal data analysis, among others. The papers in this volume will be especially useful for researchers (graduate students and other quantitative researchers) in the social sciences who use quantitative methods, particularly psychologists. Most readers will benefit from some prior knowledge of statistical methods in reading the chapters.
