Great Basin incident organizer Jones & Bartlett Publishers

In the second edition of ""Incident Management for the Street-Smart Fire Officer"", author Skip Coleman expands on the mindset and tactics

necessary to manage the fireground with more control and less chaos. Incident management system (IMS) is a tool that defines the role and responsibilities of each fire department member, allowing crew members to function quickly and efficiently upon arrival at the fireground - all the while meeting the commander's expectations. Regardless of the size or geographic location of fire department, an IMS is one of the most practical innovations available that yields

measurable results. The days of chief officers pulling up to a fire and allowing the fire to run them are over. Incident management makes thinkers out of commanders.

The Wildland Fire Incident Management Field Guide is a revision of what used to be called the Fireline Handbook, PMS 410-1. This guide has been renamed because, over time, the original purpose of the Fireline Handbook had been replaced

by the Incident Response Pocket Guide, PMS 461. As a result, this new guide is aimed at a different audience, and it was felt a new name was in order.

Terrorism threats and increased school and workplace violence have always generated headlines, but in

recent years, the response to these events has received heightened media scrutiny. Critical Incident Management: A Complete Resource Guide, Second Edition provides evidence-based, tested, and proven methodologies applicable to a host of scenarios that may be encountered in the public and private sector. Filled with tactical direction designed to prevent, contain, manage, and

resolve emergencies and critical incidents efficiently and effectively, this volume explores: The phases of a critical incident response and tasks that must be implemented to stabilize the scene
Leadership style and techniques required to manage a critical incident successfully
The National Incident Management System (NIMS) and the Incident Command System (ICS)

Guidelines for responding to hazardous materials and weapons of mass destruction incidents
Critical incident stress management for responders
Maintaining continuity of business and delivery of products or services in the face of a crisis
Roles of high-level personnel in setting policy and direction for the response and recovery efforts
Augmented by

Seven Critical Tasks™ that have been the industry standard for emergency management and response, the book guides readers through every aspect of a critical incident: from taking initial scene command, to managing resources, to resolution, and finally to recovery and mitigation from the incident. Incident Management for the Street-Smart Fire Officer Nova Publishers

Our nation faces the distinct possibility of a catastrophic terrorist attack using an improvised nuclear device (IND), according to international and U.S. intelligence. Detonation of an IND in a major U.S. city would result in tens of thousands to hundreds of thousands of victims and would overwhelm public health, emergency response, and health care systems, not to mention creating unprecedented social and economic challenges. While preparing for an IND may seem futile at first glance, thousands of lives can be saved by informed planning and decision making prior to and following an attack. In 2009, the Institute of Medicine published the proceedings of a workshop assessing the health and medical preparedness for responding to an IND detonation. Since that time, multiple federal and other publications have added layers of detail to this conceptual framework, resulting in a significant body of literature and guidance. However, there has been only limited planning effort at the local level as much of the federal guidance has not been translated into action for

states, cities and counties. According to an informal survey of community preparedness by the National Association of City and County Health Officials (NACCHO), planning for a radiation incident ranked lowest in priority among other hazards by 2,800 local health departments. The focus of Nationwide Response Issues After an Improvised Nuclear Device Attack:	Medical and Public Health Considerations for Neighboring Jurisdictions: Workshop Summary is on key response requirements faced by public health and health care systems in response to an IND detonation, especially those planning needs of outlying state and local jurisdictions from the detonation site. The specific meeting objectives were as follows: -	Understand the differences between types of radiation incidents and implications of an IND attack on outlying communities. -Highlight current planning efforts at the federal, state, and local level as well as challenges to the implementation of operational plans. -Examine gaps in planning efforts and possible challenges and solutions. -Identify
--	--	---

considerations for public health reception centers: how public health and health care interface with functions and staffing and how radiological assessments and triage be handled. -Discuss the possibilities and benefits of integration of disaster transport systems. -Explore roles of regional health care coalitions in

coordination of health care response.
