fmc user s guide

Also I think the event you want is the change event - the documentation (for 4.1) says . Fires when the value of a field is changed via the setValue method. whereas select only fires when someone clicks the combobox. Just a bit of an aside but I'd also question using an event for this - you know you've called setValue so why don't you just do the thing that you want to happen after you call ...
