From seed catalogues to greenhouses, public gardens to horticultural societies, you'll find information and sources for everything you need, conveniently organized by location. Environmental Social Work John Wiley & Sons

Social work is the profession that claims to intervene to enhance people's well-being. However, social workers have played a low-key role in environmental issues that increasingly impact on people's well-being, both locally and globally. This compelling new contribution confronts this topic head-on, examining environmental issues from a social work perspective. Lena Dominelli draws attention to the important voice of practitioners working on the ground in the aftermath of environmental disasters, whether these are caused by climate change, industrial accidents or human conflict. The author explores the concept of 'green social work' and its role in using environmental crises to address poverty and other forms of structural inequalities, to obtain more equitable allocations of limited natural resources and to tackle global socio-political forces that have a damaging impact upon the quality of life of poor and marginalized populations at local levels. The resolution of these matters is linked to community initiatives that social workers can engage in to ensure that the quality of life of poor people can be enhanced without costing the Earth. This important book will appeal to those in the fields of social work, social policy, sociology and human geography. It powerfully reveals how environmental issues are an integral part of social work's remit if it is to retain its currency in the modern world and emphasize its relevance to the social issues that societies have to resolve in the twenty-first century.

Based on the thesis that individuals develop not in isolation, but in a direction consistent with both personal needs and the needs of the surrounding environment, this volume concentrates on the development of adults in their careers within organizations. The organizational and individual perspectives offered provide practical guidance and examples for human resource development specialists to use in the evaluation of their current career development programs and the design of new ones. Key issues receiving prime attention include the necessity of reward systems to the success of any career development program, career transitions, and five critical career development research areas.

This book concerns the analysis and design of induction heating of poor electrical conduction materials. Some innovating applications such as inductive plasma installation or transformers, thermo inductive non-destructive testing and carbon-reinforced composite materials heating are studied. Analytical, semi-analytical and numerical models are combined to obtain the best modeling technique for each case. Each model has been tested with experimental results and validated. The principal aspects of a computational package to solve these kinds of coupled problems are described. In the first chapter, the mathematical tools for coupled electromagnetic and thermal phenomena are introduced. In Chapter 2, these tools are used to analyze a radio frequency inductive plasma installation. The third chapter describes the methodology of designing a low frequency plasma transformer. Chapter 4 studies the feasibility of the thermo inductive technique for non-destructive testing and the final chapter is dedicated to the use of induction heating in the lifecycle of carbon-reinforced composite materials. Contents 1. Thermal and Electromagnetic Coupling, Javad Fouladgar, Didier Trichet and Brahim Ramdane. 2. Simplified Model of a Radiofrequency Inductive Thermal Plasma Installation, Javad Fouladgar and Jean-Pierre Ploteau. 3. Design Methodology of A Very Low-Frequency Plasma Transformer, Javad Fouladgar and Souril Mohamed Mimoune. 4. Non Destructive Testing by Thermo-Inductive Method, Javad Fouladgar, Brahim Ramdane, Didier Trichet and Tayeb Saidi. 5. Judo for Soldiers Illustrated After Pearl Harbor and the U.S. entry into WWII, there was a need for troops to be taught how to prevail in Hand-to-Hand combat with the enemy. This book, written by the author of "Police Jiu-Jitsu", sought to fill this void by presenting some basic and practical Judo moves that could aid a soldier who might come face to face with the enemy. Well organized, and presented in a 'you are in the training class at boot camp' fashion complete with fellow soldiers from Detroit, the Bronx and even the Mid-west, it offers examples of simple hold releases and counters for many fighting scenarios and situations. Clear illustrations give a good sense of how the techniques are employed, which makes it easy

to see how you would do them yourself. A gem of a book, especially for students of martial arts history and World War 2 era combat technique. It even features a small section at the end showing several moves especially for women and demonstrated in the same narrative style using WAAC recruits learning self-defense.
