Strabo of Amasia, a Greek geographer of the Augusto-Tiberian period, observed the Roman world of his time. He collected his observations in his magnum opus, the Geography, which he described as a 'Kolossourgia', a colossal statue of a work. This term reflects not only the work's size in seventeen books, but also its multi-faceted nature, composed of many different elements like the detailing on a statue. In this 2005 volume an international team of Strabo scholars explores those details, discussing the cultural, political, historical and geographical questions addressed in the Geography. The collection offers a number of different approaches to the study of Strabo, from traditional literary and historical perspectives to newer material and feminist readings. These diverse themes and approaches inform each other to provide a wide-ranging exploration of

Strabo's work, making the book essential reading for students of ancient history and ancient geography.

The book that helped inspire Anthony Doerr 's *All the Light We Cannot See* An updated edition of this classic World War II memoir, chosen as one of the 100 Best Spiritual Books of the Twentieth Century, with a new photo insert and restored passages from the original French edition When Jacques Lusseyran was an eight-year-old Parisian schoolboy, he was blinded in an accident. He finished his schooling determined to participate in the world around him. In 1941, when he was seventeen, that world was Nazi-occupied France. Lusseyran formed a resistance group with fifty-two boys and used his heightened senses to recruit the best. Eventually, Lusseyran was arrested and sent to the Buchenwald concentration camp in a transport of two thousand resistance fighters. He was one of only thirty from the transport to survive. His gripping story is one of the most powerful and insightful

descriptions of living and thriving with blindness, or indeed any challenge, ever published.

What would you do if you discovered your whole life to be a lie? Daniel Henstock thinks he 's an ordinary schoolboy but on his sixteenth birthday his world is turned upside down. He is the world 's first one-hundred percent genetically-engineered human - assigned the codename Tiberius - and Gregory Dryden, the man responsible, wants him back so that he can continue his deadly experiments. Running for his life, Daniel flees to New York and is forced to go ' off-grid ' . In this near-future America, where the security-obsessed authorities require citizens to carry DNA cards, Daniel meets the feisty and beautiful Eleanor. But by falling for her, Daniel also puts her in terrible danger. Daniel pursues the facts about his origins but is hunted by an agent sent by Dryden to bring him to heel. Can Daniel find out the truth whilst trying to evade those who think they own him? As his enemies close in Daniel must draw on resources he never knew he had to win his freedom - but in doing so he may be walking into a deadly trap ...

For four decades, Petroleum Refining has guided thousands of readers toward a reliable understanding of the field, and through the years has become the standard text in many schools and universities around the world offering petroleum refining classes, for self-study, training, and as a reference for industry professionals. The sixth edition of this perennial bestseller continues in the tradition set by Jim Gary as the most modern and authoritative guide in the field. Updated and expanded to reflect new technologies, methods, and topics, the book includes new discussion on the business and economics of refining, cost estimation and complexity, crude origins and

properties, fuel specifications, and updates on technology, process units, and catalysts. The first half of the book is written for a general audience to introduce the primary economic and market characteristics of the industry and to describe the inputs and outputs of refining. Most of this material is new to this edition and can be read independently or in parallel with the rest of the text. In the second half of the book, a technical review of the main process units of a refinery is provided, beginning with distillation and covering each of the primary conversion and treatment processes. Much of this material was reorganized, updated, and rewritten with greater emphasis on reaction chemistry and the role of catalysis in applications. Petroleum Refining: Technology, Economics, and Markets is a book written for users, the practitioners of refining, and all those who want to learn more about the field.
