The book Intelligent Systems
and Applications -

Proceedings of the 2020
Intelligent Systems

Conference is a remarkable
collection of chapters
covering a wider range of
topics in areas of intelligent
systems and artificial
intelligence and their
applications to the real world.

The Conference attracted a
total of 545 submissions from
many academic pioneering
researchers, scientists,

industrial engineers, students from all around the world. These submissions underwent a double-blind peer review process. Of those 545 submissions, 177 submissions have been selected to be included in these proceedings. As intelligent systems continue to replace and sometimes outperform human intelligence in decision-making processes, they have enabled a larger number of problems to be tackled more effectively. This branching out of computational intelligence in several directions and use of intelligent systems in everyday applications have created the need for such an international conference which serves as a venue to report on up-to-the-minute innovations and developments. This book collects both theory and application based chapters on all aspects of artificial intelligence, from classical to intelligent scope. We hope that readers find the volume interesting and valuable; it provides the state of the art intelligent methods and techniques for solving real world problems along with a vision of the future research.
