This Biographical Dictionary seeks to put the world of technology in the context of those who have made the most important contribution to it. For the first time information has been gathered on the people who have made the most significant advances in technology. From ancient times to the present day, the major inventors, discoverers and entrepreneurs from around the world are profiled, and their contribution to society explained and assessed. Structure The Dictionary presents descriptive and analytical biographies of its subjects in alphabetical order for ease of reference. Each entry provides detailed information on the individual's life, work and relevance to their particular field. * in the first part of the entry, the information will include the dates and places of the subject's birth and death, together with their nationality and their field of activity * in the main body of the entry there follows an account of their principal achievements and their significance in the history of technology, along with full details of appointments and honours * finally an annotated bibliography will direct the reader to the subject's principal writings and publications and to the most important secondary works which the reader can consult for further information. Special Features: * The first work in existence to examine technologists in detail * Contains over 1,500 entries giving detailed information * Extensive cross-references enable the reader to compare subjects and build up a picture of technological advance^ * Figures drawn from fields such as Aeronautics, Telecommunications, Architecture, Photography and Textiles Senate Documents, Otherwise Publ. as Public Documents and Executive Documents Elsevier

This book presents a sample of theoretical and practical advances in applied sciences in the study of technical historical and/or industrial heritage. It covers several applications, such as geometric modelling and virtual reconstruction, computer-aided design and kinematic simulation, history of manufacturing, digital techniques in industrial heritage areas, building efficient management models, proposal for heritage intervention in a BIM environment, three-dimensional modelling using unmanned aerial vehicle imagery, computer-aided design, computer-aided engineering, and multi-criteria cataloging of the immovable items of industrial heritage. The contributions included in this book describe the state-of-the-art advances in this field and indicate the potential of studies of technical historical or industrial heritage in multidisciplinary applications in the fields of engineering and architecture.
