Living Standards Measurement Study No.108. Nigeria, which has experienced high fertility and rapid population growth over the past 30 years, has launched efforts to stem its population growth through contraceptive use. In this study, individual women are linked to the characteristics of the nearest pharmacy,

health facility, and source of family planning to assess the importance of the socioeconomic background and the characteristics of nearby services for women's contraceptive use and fertility. The results suggest that limited levels of female schooling are constraining contraceptive use, particularly in rural areas. Policies to raise female schooling will raise contraceptive use and lower fertility. Broader availability of the pill through pharmacy outlets and of the injection and IUD in fixed health facilities is also likely to raise contraceptive use. Consultation fees at health facilities do not

A knowledge of matrix algebra is a prerequisite for the study of much of modern statistics, especially the areas of linear statistical models and multivariate statistics. This reference book provides the background in matrix algebra necessary to do research and understand the results in these areas. Essentially self-contained, the book is best-suited for a reader who has had some previous exposure to matrices. Solutions to the exercises are available in the author's "Matrix Algebra: Exercises and Solutions."

PREFACE. THE Author of this very practical treatise on Scotch Loch - Fishing desires clearly that it may be of use to all who had it. He does not pretend to have written anything new, but to have attempted to put what he has

to say in as readable a form as possible. Everything in the way of the history and habits of fish has been studiously avoided, and technicalities have been used as sparingly as possible. The writing of this book has afforded him pleasure in his leisure moments, and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general. dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river, it is quite another matter to arrange for a days river-fishing, if one is looking forward to a holiday at a date some weeks ahead.

Providence may favour the expectant angler with a good day, and the water in order but experience has taught most of us that the good days are in the minority, and that, as is the case with our rapid running streams, -such as many of our northern streams are, -the water is either too large or too small, unless, as previously remarked, you live near at hand, and can catch it at its best. A common belief in regard to loch-fishing is, that the tyro and the experienced angler have nearly the same chance in fishing, -the one from the stern and the other from the bow of the same boat. Of all the absurd beliefs as to loch-fishing, this is one of the most absurd. Try it. Give the tyro either end of the boat he likes give him a cast of ally flies he may fancy, or even a cast similar to those which a crack may be using and if he catches one for every three the other has, he may consider himself very lucky. Of course there are lochs where the fish are not abundant, and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught, and where each has a fair chance. Again, it is said that the boatman has as

much to do with catching trout in a loch as the angler. Well, we dont deny that. In an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream-fishing...

The remarkable story of the early days of jet development as told by the 'father of the jet engine', Frank Whittle. For aviation enthusiasts and readers of Ian Mackersey, Duncan Campbell-Smith and Graham Hoyland. On the evening of 15th May 1941, a small group gathered at RAF Cranwell in Lincolnshire to watch as the Gloster-Whittle E.28/39 made its maiden flight - Britain's first jet-engined aeroplane. This book chronicles the story behind that historic event. Sir Frank Whittle, who eleven years earlier, at the age of 22, had applied for his patent for a turbo-jet engine, here sets on record his own pioneering work and that of the small company, Power Jets Ltd, which he helped to form in 1936 to develop the engine. The dreams of his youth were brought to fruition in an invention that not only revolutionised military aircraft but set Britain ahead of the world in civil aviation, bringing the inventor a knighthood at the

age of 41. Written in non-technical language and drawing upon his own comprehensive diaries and correspondence, Sir Frank Whittle describes his hard and often bitter struggle with engineering problems, with financial difficulties and with the frustrations arising out of official policy, which came at great personal cost and which eventually led to the downfall of Power Jets. *Jet: The Story of a Pioneer* chronicles the pioneering work of Sir Frank Whittle and his determination to turn his idea into reality. 'an honest story told first hand by the pioneer engineer, flight-rated military officer, and persevering genius that was Sir Frank Whittle' - [enginehistory.org](http://enginehistory.org)

The Boatbuilder's Apprentice is a must guide for anyone planning or even dreaming about building a wooden boat. "Greg Rössel is a Renaissance man. While there are many talented boatbuilders in the world, only a handful are also good teachers. Even fewer can write or illustrate effectively. Yet this author is highly skilled in each of these areas. . . . This densely illustrated, hands-on guide to diesel engine maintenance, troubleshooting, and repair renders its subject more user-friendly than ever before. Finally, boatowners who grew up with gas engines can set aside their fears about tinkering with diesels, which are safer and

increasingly more prevalent. As in other volumes in the International Marine Sailboat Library, every step of every procedure is illustrated, so that users can work from the illustrations alone. The troubleshooting charts in the second chapter--probably the most comprehensive ever published--are followed by system-specific chapters, allowing readers to quickly diagnose problems, then turn to the chapter with solutions. Diesel engine systems covered include: mechanical; oil; fresh- and raw-water cooling; low- and high-pressure fuel; exhaust; starting; charging; transmission and stern gear.
