When the German Focke Wulf Fw190 fighter burst onto the scene over France in 1941 it took the RAF by surprise, outperforming the Spitfire Mk V. At the time the RAF described the performance gap as 'a quantum leap'. Its superior performance on the Eastern Front had a significant impact in the air war against

the Soviet Union. Graeme Douglas gets under the skin of the Fw190 with the new-build Focke Wulf Fw190A-8 and D-9 models built by the Flug Werk company in Germany. He also describes flying and maintaining the Fw190 in combat.

The Boeing B-17 was the first mass-produced, four-engine heavy bomber. Used throughout World War II for strategic bombing, the plane earned a reputation for its toughness and versatility. Carrying a crew of ten, and 8,000 pounds of bombs on long range missions, the '17

wreaked havoc on Germany during the critical years 1942-45. The "Memphis Belle," the first B-17 to fly 25 missions over Europe, is perhaps the most famous plane to emerge from the European Theatre. Originally printed by the United States Army Air Force in December of 1942, the B-17 Bomber Pilot's Flight Operating Manual taught pilots everything they needed to know about the "Queen of the Skies." Originally classified "Restricted," the manual was declassified long ago and is here reprinted in book form. Originally designed as a high-altitude interceptor, the P-38 was the first U.S. fighter of WWII to compare favorably with the Spitfire and Me-109. The twin-tailed, single seat "Fork Tailed Devil" carried four .50-caliber machine guns and a 20mm cannon, and could fly at speeds above 400 mph. An extremely successful

design, over 9500 Lightnings were built by V-J Day in 1945.

the U.S. Navy's primary fighter
from 1974 until 2006. Over 700
were built. The F-14 flew its first

initial deployment in late 1974,
flying in support of the American
withdrawal from Saigon. In 1981
it drew first blood, as two F-14s
from VF-41 downed two Libyan
Su-22s. The plane compiled a
notable combat record for the

United States in both Gulf Wars and NATO actions in Bosnia. Planes sold to the Shah of Iran prior to his ouster remain the last F-14s in active service, as the U.S. Navy retired it in October 2006. This F-14 pilot's flight operating handbook was originally produced by the U.S. Navy. It has been slightly reformatted but is reproduced here in its entirety. It provides a fascinating view inside the cockpit of one of history's great planes.

Built as both a fighter-interceptor and fighter-bomber,

the F-86 Sabre (sometimes called the Sabrejet) was one of the most widely-produced fighters of the Cold War. In December of 1950, three squadrons of Sabres were rushed into combat in Korea, where they dueled North Korean, Chinese and Russian pilots flying the MiG-15. By the time the war was over, F-86 pilots achieved a stunning victory ratio - destroying nearly 800 enemy aircraft with a loss of only 76 Sabres. The nimble jet also saw combat in the Taiwan Straight Crisis and the Indo-Pakistan Wars of 1965 and 1971. Originally printed by North American and the U.S. Air

Force, this F-86 Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. Classified "Restricted," the manual was recently declassified and is here reprinted in book form. This facsimile has been reformatted and color images appear in black and white. Designed by Lockheed's legendary engineer Clarence "Kelly" Johnson, the F-80 (first designated P-80) "Shooting Star" was one of the world's first

operational jet fighter aircraft. After it missed seeing combat in WWII - four prototype aircraft were in Europe at war's end - the plane drew first blood in Korea in 1950. Variants included a photo recon version and the two-seat T-33, both of which saw heavy service in air forces around the world.
